# GE Measurement & Control 3500/50M Tachometer Module Product Datasheet

Bently Nevada\* Asset Condition Monitoring

# Description

The 3500/50M Tachometer Module is a 2-channel module that accepts input from proximity probes or magnetic pickups to determine shaft rotative speed, rotor acceleration, or rotor direction. The module compares these measurements against user-programmable alarm setpoints and generates alarms when the setpoints are violated.

The 3500/50M Tachometer Module is programmed using the 3500 Rack Configuration software. The following configuration options are available:

- Speed Monitoring, Setpoint Alarming and Speed Band Alarming
- Speed Monitoring, Setpoint Alarming and Zero Speed Notification
- Speed Monitoring, Setpoint Alarming and Rotor Acceleration Alarming
- Speed Monitoring, Setpoint Alarming and Reverse Rotation Notification

The 3500/50M Tachometer Module can be configured to supply conditioned Keyphasor\* signals to the backplane of the 3500 rack for use by other monitors. Therefore, you don't need a separate Keyphasor module in the rack.

The 3500/50M Tachometer Module has a peak hold feature that stores the highest speed, the highest reverse speed, or the number of reverse rotations that the machine has reached. You can reset the peak values.

Bently Nevada offers an **Overspeed Protection System** (part number **141539-01**) for the 3500 System.

# WARNING

#### **PRODUCT MISUSE**

Risk of personal injury or equipment damage.

#### 3500/50M Tachometer Module:

Do **not** use 3500/50M Tachometer Module independently or as a component of a speed control or an overspeed protection system because it does **not** provide protective redundancy or the response speed needed for reliable operation as a speed control or overspeed protection system.

The analog proportional output is suitable for data logging, chart recording, or display purposes only. Speed alert setpoints are suitable for annunciation purposes only.

#### Magnetic Pickups:

Do not use magnetic pickups for the reverse rotation option or zero speed option. Otherwise, false indications of rotation direction may occur. The transducers do not provide a clean edge for the detection circuit during low speeds.

# **Ordering Considerations**

To add the 3500/50M Tachometer Module to an existing 3500 Monitoring System, you must have the following versions of firmware and software:

Firmware and Software	Version
3500/22M Module Firmware	Revision (1.70)
3500/01 Configuration Software	Version 4.20 or later
3500/02 Data Acquisition Software	Version 2.52 or later
3500/03 Display Software	Version 1.52 or later
3500/50M Firmware	Revision 5.30 or later

Consider the following guidelines and restrictions before placing an order:

- External Termination Blocks cannot be used with Internal Termination I/O modules.
- When ordering I/O Modules with External Terminations, you must order External Termination Blocks and cables separately.
- Use Bussed External Termination Blocks with TMR I/O modules only.
- Before selecting the Internal Barrier option, see 3500 Internal Barriers product datasheet (document 141495).
