# Signet 2724-2726 pH/ORP Electrodes

# General Purpose

### Compatible with ALL Signet pH/ORP instruments and SmartPro transmitters

Flat Glass

Protected Bulb

The Signet 2724-2726 pH and ORP electrodes are general purpose sensors ideal for a wide range of applications. These feature a patented reference design and uses the unique foul-proof patented DryLoc<sup>®</sup> connector. The large area PE reference junction and pathway is constructed to increase the total reference effectiveness and ensures long service life.

The DryLoc® connector with corrosion resistant gold plated contacts readily connects the sensor to the mating 2751 pH/ORP Smart Sensor Electronics or the 2760 Preamplifier. The robust Ryton® threaded sensor body and choice of flat pH, bulb pH, or flat ORP sensing elements allows a broad range of chemical and mechanical compatibility for a wide variety of applications.

There are two optional pH sensing versions available, HF and LC. The HF version is for applications where traces of hydrofluoric acid (2% or less) will attack standard pH glass. The LC version can be used for low conductivity fluids 20 - 100  $\mu$ S/cm nominal and below 20  $\mu$ S when mounted under controlled conditions.

The quick temperature response is available in either a Pt1000 or 3 K $\Omega$  temperature sensor and allows compatibility with all Signet pH/ORP instruments. The 2724-2726 electrodes incorporate  $\frac{3}{4}$  inch NPT or ISO 7/1-R 3/4 threads for installing into standard pipe-tees. They can also be mounted directly into Signet standard fittings, DN15 to DN100 ( $\frac{1}{2}$  to 4 inch).

### Features

- Patented reference design for exceptional performance and prolonged life in harsh environments\*
- Memory chip enabled for access to a wide range of unique features when connected to the Signet 2751 pH/ORP Smart Sensor Electronics
- Ryton® (PPS) body for broad range of chemical compatibility
- Patented DryLoc<sup>®</sup> connector with gold plated contacts
- Special design allows for installation at any angle, even inverted or horizontal
- ¾" NPT or ISO 7/1-R 3/4 threaded sensors for use with reducing tees DN15 to DN100 (½ to 4 in.)
- Mounts in Signet standard fittings from DN15 to DN100 (1/2 to 4 in.)
- Quick temperature response
- Bulb and flat HF resistant glass available for trace HF, in less than 2% concentration applications
- Low conductivity sensor available for liquids down to 20  $\mu\text{S/cm}$

## **Applications**

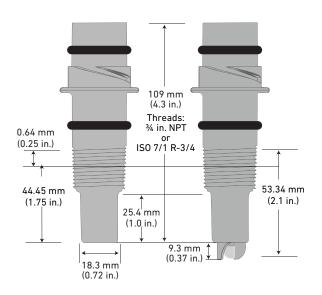

- Water & Wastewater Treatment
- Neutralization Systems
- Effluent Monitoring
- Sanitization Systems
- Pool & Spa Control
- Aquatic Animal Life Support Systems
- Process Control
- Cooling Towers

## Dimensions

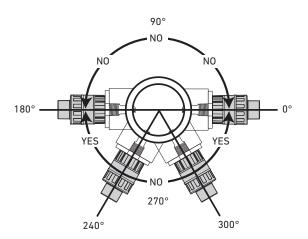

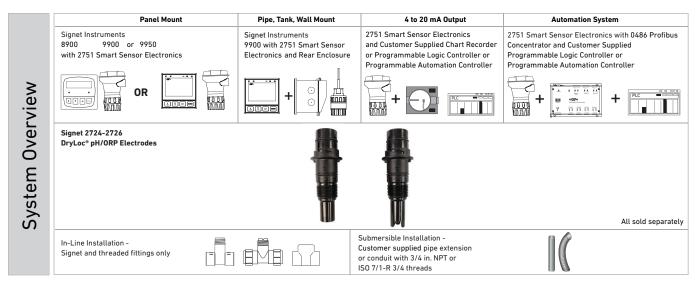

#### **Mounting Angle**

Models 2724-2726 may be mounted at any angle without affecting the performance.

\*Avoid locations with air pockets and sediment.

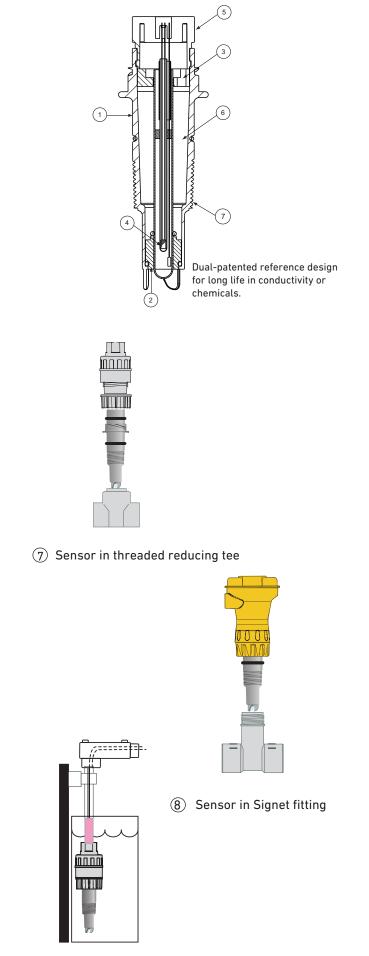

When mounting in standard threaded fittings the electrode must be mounted horizontally to 60 degrees below horizontal position only.

## **Electrode Key Features and Benefits:**

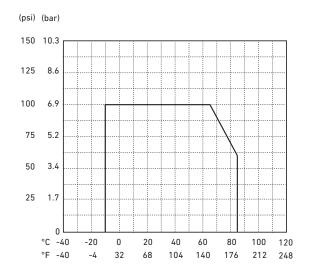

- 1. Ryton<sup>®</sup> body for chemical compatibility with most harsh chemicals.
- 2. Porous UHMW PE (ultra high molecular weight polyethylene) junction resists fouling and build-up.
- Memory chip enabled for convenient data storage and access (calibration data, operational data, and manufacturing data), electrode health monitoring via glass impedance measurement when used in connection with the 2751 pH/ORP Smart Sensor Electronics.
- 4. Internal temperature sensor located in the glass stem for a quick temperature response.
- DryLoc<sup>®</sup> connector with corrosion resistant gold plated pins for quick and easy sensor removal. Resists moisture and dirt intrusion.
- Dual-patented reference design with a 406 mm (16 in.) reference pathway for prolonged life in harsh environments. This enables the sensor to last significantly longer than other standard pH/ORP electrodes in most applications.
- 6a. With the patented reference design, the Signet 2726-LC version performs better in low conductivity water between 20 - 100 μS and lasts longer than previous "DI" electrodes.
- 6b. The 2726-LC sensor also performs in applications with extremely low (less than 20 μS) conductivity. Special precautions must be taken to avoid measurement complications. Please note the following.
  - Electrostatic charges (streaming potentials) can cause dramatic offsets in a system with very low conductivity water. To minimize this, sensors should be placed in a well grounded system.
  - To enhance performance, a low flow cell is recommended to provide a steady flow rate (150 ml/minute). Sensors placed in high flow applications will experience noisier readings due to streaming potential.
- 7. Threads for NPT or ISO process connection into reducing tees
  - Use off-the-shelf GF reducing tees DN20 to DN100 (3/4 to 4 in.).
- 8. Mounts directly into Signet fittings (½ to 4 in.) for easy sensor retrofitting.
- Mount submersed into a tank via the 2751 or 2760 back threads.

# **Temperature/Pressure Graph**

#### Note:

The pressure/temperature graphs are specifically for the Signet sensor. During system design the specifications of all components must be considered. In the case of a metal piping system, a plastic sensor will reduce the system specification.

### **Application Tips**

- Use the flat glass electrodes when a self-cleaning feature is desired; especially useful in applications with abrasive chemicals for in-line installations.
- Use bulb protected electrodes for low temperature applications or where fast response is required.
- ORP electrodes are generally used for chemical reaction monitoring, not control.
- Ensure that sensor materials are chemically compatible with the process liquid.
- Keep electrode tip wet, avoid air pockets and sediment.

### Model 2724-2726 Ordering Notes

- pH and ORP electrodes require connection to model 2751 pH/ORP Smart Sensor Electronics or 2760 Preamplifier.
- The 2751 "EasyCal" feature recognizes common pH and ORP buffer values of 4, 7 and 10 pH and +87, +264 and +469 mV for ORP.

### **Buffer Solutions**

3822-7004 3822-7007 3822-7010

The Signet pH buffers are ideal for calibration. The liquid solutions are conveniently packaged in one pint (473 ml) bottles. pH buffer kits in powder pillows are available for mixing fresh solutions with water at the time of use.

All pH buffers are color coded for easy identification; 4.01 pH is red, 7.00 pH is yellow, and 10.00 pH is blue. All pH buffers are traceable to NIST standards. The 4.01 and 7.00 pH buffer solutions can be used to calibrate ORP sensors when saturated with quinhydrone.
