Technical Information **iTHERM TM401**

Resistance thermometer for hygienic and aseptic applications

Metric version with basic technology for all standard applications, permanent insert

Applications

- Specially designed for use in hygienic and aseptic applications in the Food & Beverages and Life Sciences industries
- Measuring range: -50 to +200 °C (-58 to +392 °F)
- Pressure range up to 50 bar (725 psi)
- Protection class: up to IP69K
- Can be used in non-hazardous areas

Head transmitter

All Endress+Hauser transmitters are available with enhanced accuracy and reliability compared to directly wired sensors. Easy customizing by choosing one of the following outputs and communication protocols:

Analog output 4 to 20 mA, HART®

Your benefits

- Excellent value for money and fast delivery
- User-friendly and reliable from product selection to maintenance
- International certification: hygiene standards as per 3-A[®], EHEDG, ASME BPE, FDA, TSE Certificate of Suitability
- Wide range of process connections

Function and system design

iTHERM Hygiene line

This thermometer is part of the product line of modular thermometers for hygienic and aseptic applications.

Differentiating factors when selecting a suitable thermometer

| TM4x1 | TM4x 2 |
|----------------|------------------|
| Metric version | Imperial version |
| \downarrow | |

TM41x characterizes the device that uses cutting-edge technology, with features such as a replaceable insert, quick-fastening extension neck (iTHERM QuickNeck), vibration-resistant and fast-response sensor technology (iTHERM StrongSens and QuickSens) and approval for use in hazardous areas

TM40x characterizes the device that uses basic technology, with features such as a fixed, non-replaceable insert, application in non-hazardous areas, standard extension neck, low-cost unit

Measuring principle

Resistance thermometer (RTD)

These resistance thermometers use a Pt100 temperature sensor according to IEC 60751. The temperature sensor is a temperature-sensitive platinum resistor with a resistance of 100 Ω at 0 °C (32 °F) and a temperature coefficient α = 0.003851 °C⁻¹.

There are generally two different kinds of platinum resistance thermometers:

- Wire wound (WW): Here, a double coil of fine, high-purity platinum wire is located in a ceramic support. This is then sealed top and bottom with a ceramic protective layer. Such resistance thermometers not only facilitate very reproducible measurements but also offer good long-term stability of the resistance/temperature characteristic within temperature ranges up to 600 °C (1112 °F). This type of sensor is relatively large in size and it is comparatively sensitive to vibrations.
- Thin film platinum resistance thermometers (TF): A very thin, ultrapure platinum layer, approx. 1 µm thick, is vaporized in a vacuum on a ceramic substrate and then structured photolithographically. The platinum conductor paths formed in this way create the measuring resistance. Additional covering and passivation layers are applied and reliably protect the thin platinum layer from contamination and oxidation, even at high temperatures.

The primary advantages of thin film temperature sensors over wire wound versions are their smaller sizes and better vibration resistance. A relatively low principle-based deviation of the resistance/ temperature characteristic from the standard characteristic of IEC 60751 can frequently be observed among TF sensors at high temperatures. As a result, the tight limit values of tolerance category A as per IEC 60751 can only be observed with TF sensors at temperatures up to approx. 300 °C (572 °F). For this reason, thin-film sensors are generally only used for temperature measurements in ranges below 400 °C (752 °F).

Measuring system

Endress+Hauser offers a complete portfolio of optimized components for the temperature measuring point – everything you need for the seamless integration of the measuring point into the overall facility. This includes:

- Power supply unit/barrier
- Display units
- Overvoltage protection

For more information, see the brochure 'System Components - Solutions for a Complete Measuring Point' (FA00016K/EN)

- E 1 Example of application, measuring point layout with additional Endress+Hauser components
- 1 Installed iTHERM resistance thermometer with integrated HART[®] head transmitter
- 3 Active barrier RN221N The RN221N (24 V DC, 30 mA) active barrier has a galvanically isolated output for supplying voltage to loop-powered transmitters. The universal power supply works with an input supply voltage of 20 to 250 V DC/AC, 50/60 Hz, which means that it can be used in all international power grids. More information on this can be found in the Technical Information, see "Documentation", $\rightarrow \cong 26$.

 Pt100 thin-film
 -50 to +200 °C (-58 to +392 °F)

Output **Output signal** Generally, the measured value can be transmitted in one of two ways: Directly-wired sensors - sensor measured values forwarded without a transmitter. • Via all common protocols by selecting an appropriate Endress+Hauser iTEMP temperature transmitter. All the transmitters listed below are mounted directly in the terminal head and wired with the sensory mechanism. Family of temperature Thermometers fitted with iTEMP transmitters are an installation-ready complete solution to improve temperature measurement by significantly increasing accuracy and reliability, when transmitters compared to direct wired sensors, as well as reducing both wiring and maintenance costs. PC programmable head transmitters They offer a high degree of flexibility, thereby supporting universal application with low inventory storage. The iTEMP transmitters can be configured quickly and easily at a PC. Endress+Hauser offers free configuration software which can be downloaded from the Endress+Hauser Website. More information can be found in the Technical Information. HART[®] programmable head transmitters The transmitter is a 2-wire device with one or two measuring inputs and one analog output. The device not only transfers converted signals from resistance thermometers and thermocouples, it also transfers resistance and voltage signals using HART[®] communication. It can be installed as an intrinsically safe apparatus in Zone 1 hazardous areas and is used for instrumentation in the terminal head (flat face) as per DIN EN 50446. Swift and easy operation, visualization and maintenance by PC using operating software, Simatic PDM or AMS. For more information, see the Technical Information. Advantages of the iTEMP transmitters: Dual or single sensor input (optionally for certain transmitters) Unsurpassed reliability, accuracy and long-term stability in critical processes Mathematical functions • Monitoring of the thermometer drift, sensor backup functionality, sensor diagnostic functions • Sensor-transmitter matching for dual sensor input transmitter, based on Callendar/Van Dusen coefficients

Wiring

According to the 3-A[®] Standard electrical connecting cables must be smooth, corrosion-resistant and easy to clean.

• Grounding or shield connections are possible via special ground terminals on the terminal head.

Wiring diagrams for RTD

Cable entries

See the 'Terminal head' section

1) Wires marked 'i' are not connected and are insulated with heat shrink tubes.

Overvoltage protection To protect against overvoltage in the power supply and signal/communication cables for the thermometer electronics, Endress+Hauser offers the HAW562 surge arrester for DIN rail mounting and the HAW569 for field housing installation.

For more information see the Technical Information 'HAW562 Surge arrester' TI01012K and 'HAW569 Surge arrester' TI01013K.

Performance characteristics

| Reference conditions | These data are relevant for determining the accuracy of the temperature transmitters used. More information on this can be found in the Technical Information of the iTEMP temperature transmitters. $\rightarrow \square 26$ | | |
|----------------------|---|---|--|
| Accuracy | RTD resistance thermometer as per IEC 60751 | | |

Response time without transmitter.

| to determine the deviation of the DUT's measured values from the true value of the measured variable. Two different methods are used for thermometers: Calibration at fixed-point temperatures, e.g. at the freezing point of water at 0 °C, Calibration compared against a precise reference thermometer. |
|---|
| The thermometer to be calibrated must display the fixed point temperature or the temperature of the reference thermometer as accurately as possible. Temperature-controlled calibration baths with very homogeneous thermal values, or special calibration furnaces are typically used for thermometer calibrations. The measuring uncertainty may increase due to heat conduction errors and short immersion lengths. The existing measuring uncertainty is recorded on the individual certificate of calibration. For accredited calibrations in accordance with ISO17025, a measuring uncertainty that is twice as high as the accredited measuring uncertainty is not permitted. If this limit is exceeded, only a factory calibration is possible. |
| For the device, Endress+Hauser offers standard calibrations at a reference temperature of -50 to $+200$ °C (-58 to $+392$ °F) based on the ITS90 (International Temperature Scale). Calibrations in other temperature ranges are available from your Endress+Hauser sales center on request. Calibrations are traceable to national and international standards. The calibration certificate is referenced to the serial number of the thermometer. |
| Insulation resistance \geq 100 M Ω at ambient temperature. |
| Insulation resistance between the terminals and the outer jacket is measured with a minimum voltage of 100 V DC. |
| |

Installation

| Orientation | No restrictions. However, self-draining in the process must be guaranteed. If there is an opening to detect leaks at the process connection, this opening must be at the lowest possible point. | | |
|---------------------------|---|--|--|
| Installation instructions | The immersion length of the thermometer can influence the accuracy. If the immersion length is too small then errors in the measurement are caused by heat conduction via the process connection and the container wall. If installing into a pipe then the immersion length should ideally be half of the pipe diameter. | | |
| | Installation possibilities: Pipes, tanks or other plant components To minimize the error caused by heat conduction, a minimum immersion length, which corresponds to the calibration, is recommended depending on the type of sensor used. | | |

2 Installation examples

- 1, 2 Perpendicular to flow direction, installed at a min. angle of 3° to ensure self-draining
- 3 On elbows
- 4 Inclined installation in pipes with a small nominal diameter
- U Immersion length

In the case of pipes with a small nominal diameter, it is advisable for the tip of the thermometer to project well into the process so that it extends past the pipe axis. Installation at an angle (4) could be another solution. When determining the immersion length or installation depth all the parameters of the thermometer and of the medium to be measured must be taken into account (e.g. flow velocity, process pressure).

- Process connections for thermometer installation in pipes with small nominal diameters
- 1 Varivent[®] process connection D = 50 mm for DN25 pipes
- 2 Clamp or micro-clamp

- E 4 Detailed installation instructions for hygiene-compliant installation
- 1 Sanitary connection according to DIN 11851, only in conjunction with self-centering sealing ring as per EHEDG position paper
- 2 Varivent[®] process connection for VARINLINE[®] housing
- 3 Clamp as per ISO 2852, only in conjunction with seal as per EHEDG position paper
- 4 Process connection Liquiphant-M G1", horizontal installation

The counterpieces for the process connections and the seals or sealing rings are not included in the scope of supply for the thermometer. Liquiphant M weld-in adapters with associated seal kits are available as accessories. $\rightarrow \cong 22$.

The following action must be taken if a sealing ring (O-ring) or seal fails:

- Remove the thermometer, clean the thread and the O-ring joint/sealing surface
- Replace the sealing ring or seal
- Perform CIP after installation

In the case of weld-in connections, exercise the necessary degree of care when performing the welding work on the process side:

- Suitable welding material
- Flush-welded or with welding radius >= 3.2 mm (0.13 in)
- No recesses, folds or gaps
- Honed and polished surface, Ra $\leq 0.76~\mu m$ (30 $\mu in)$

As a general rule, the thermometers should be installed in such a way that does not impact their ability to be cleaned (the requirements of the 3-A® Standard must be observed). The Varivent[®] and Liquiphant M weld-in adapter connections enable flush-mounted installation.

Environment

| Ambient temperature range | bient temperature range Terminal head | | Temperature in °C (°F) | |
|----------------------------------|---|--|---|--|
| Without mounted head transmitter | | | Depends on the terminal head used and the cable gland or fieldbus connector, see 'Terminal heads' section | |
| | With mounted head transmitter | | -40 to 85 °C (-40 to 185 °F) | |
| | With mounted head transmitter and display | | -20 to 70 °C (-4 to 158 °F) | |
| | | | | |
| | Terminal head | Temperature in °C (°F) | | |
| | Without mounted head transmitter | r Depends on the terminal head used and the cable gland or fieldbus connector, see Terminal heads' section | | |
| | With mounted head transmitter -40 | |) to 85 °C (−40 to 185 °F) | |
| | | | | |
| Storage temperature | For information, see the ambient temperature. | | | |
| Humidity | Depends on the transmitter used. If using Endress+Hauser iTEMP head transmitters: Condensation permitted as per IEC 60 068-2-33 Max. rel. humidity: 95% as per IEC 60068-2-30 | | | |

| Climate class | As per EN 60654-1, Class C | | | |
|--|---|--|--|--|
| Degree of protection | Max. IP69K, depending on the design (terminal head, connector, etc.) | | | |
| Shock and vibration resistance | The Endress+Hau resistance of 3g in depends on the se | The Endress+Hauser inserts meet the requirements of IEC 60751 which specify shock and vibration resistance of 3g in the range from 10 to 500 Hz. The vibration resistance at the measuring point depends on the sensor type and design, see the following table: | | |
| | Version | Vibration resistance for the sensor tip | | |
| | Pt100 (TF) | 30 m/s² (3g) | | |
| Electromagnetic compatibility (EMC) | Depends on the head transmitter used. For details see the Technical Information. $\rightarrow \square 26$ | | | |

Process

| Process temperature range | Maximum –50 to +200 °C (–58 to +392 °F) |
|---------------------------|--|
| Thermal shock | Thermal shock resistance in CIP/SIP process (temperature increase within 2 seconds from +5 to +130 $^{\circ}$ C (+41 to +266 $^{\circ}$ F)). |
| Process pressure range | The maximum possible process pressure depends on various influencing factors, such as the thermometer design, process connection and process temperature. For information on the maximum possible process pressures for the individual process connections, see the 'Process connection' section. $\rightarrow \cong 16$ |
| | It is possible to check the mechanical loading capacity as a function of the installation and process conditions online in the TW Sizing Module for thermowells in the Endress+Hauser Applicator software. See also the 'Accessories' section. $\rightarrow \cong 25$ |
| | Example of the permitted flow rate as a function of the immersion length and medium |
| | The highest flow velocity tolerated by the thermometer diminishes with increasing thermometer |

The highest flow velocity tolerated by the thermometer diminishes with increasing thermometer immersion length exposed to the stream of the fluid. In addition it is dependent on the diameter of the thermometer tip, on the kind of measuring medium, on the process temperature and on the process pressure. The following figures exemplify the maximum permitted flow velocities in water and superheated steam at a process pressure of 40 bar (580 PSI).

₽ 5 Permitted flow velocities, thermowell diameter 6 mm (¼ in)

- Medium water at $T = 50 \degree C (122 \degree F)$ Α
- Medium superheated steam at $T = 400 \degree C (752 \degree F)$ В
- L Immersion length exposed to flow
- Flow velocity v

Medium - state of aggregation

Gaseous or liquid (also with high viscosity, e.g. yogurt).

Mechanical construction

A Version with process connection

- *B* Version without process connection or optionally with compression fitting
- 1 Thermometer with process connection and M24x1.5 thread to terminal head shape of tip $\Phi6$ mm (¼ in) straight or
- 2 Optional shape of tip: $\phi 8 mm$ (0.31 in) reduced to 5.3 mm (0.21 in)
- 3 Thermometer with process connection and NPT ¹/₂" thread to the terminal head
- 4 Thermometer without process connection with M24x1.5 thread (optional NPT ½" thread) to terminal head shape of tip Φ6 mm (¼ in) reduced
- 5 Thermometer with spherical, movable TK40 compression fitting for weld-in shape of tip Φ6 mm (¼ in) reduced
- 6 Thermometer with spherical, fixed TK40 compression fitting for weld-in shape of tip ϕ 6 mm (¹/₄ in) reduced
- *T* Length of extension neck (T = 0, for version without process connection or for version with movable compression fitting)
- U Immersion length

Weight

0.5 to 2.5 kg (1 to 5.5 lbs) for standard options.

Material

The temperatures for continuous operation specified in the following table are only intended as reference values for use of the various materials in air and without any significant compressive load.

| Designation | Short form | Recommended max. temperature for continuous use in air | Properties |
|--|-------------------------------------|---|---|
| AISI 316L (corresponds to 1.4404 or 1.4435) | X2CrNiMo17-13-2, X2CrNiMo18-14-3 | 650 °C (1202 °F) ¹⁾ | Austenitic, stainless steel High corrosion resistance in general Particularly high corrosion resistance in chlorine-based and acidic, non-oxidizing atmospheres through the addition of molybdenum (e.g. phosphoric and sulfuric acids, acetic and tartaric acids with a low concentration) Increased resistance to intergranular corrosion and pitting The wetted part in a protective tube is made of 316L or 1.4435+316L passivated with 3% sulfuric acid. |

The maximum operating temperatures can be reduced considerably in cases where abnormal conditions such as high mechanical load occur or in aggressive media.

 Can be used to a limited extent up to 800 °C (1472 °F) for low compressive loads and in non-corrosive media. Contact your Endress+Hauser sales team for further information.

Surface roughness

| Values for wetted surfaces: | |
|------------------------------------|--|
| Standard surface | $R_a \le 0.76 \ \mu m \ (30 \ \mu in)$ |
| Finely honed surface ¹⁾ | $R_a \le 0.38 \ \mu m \ (15 \ \mu in)$ |

1) Not compliant with ASME BPE

Terminal heads

All terminal heads have an internal shape and size in accordance with DIN EN 50446, flat face and a thermometer connection with a M24x1.5 or $\frac{1}{2}$ " NPT thread. All dimensions in mm (in). The sample cable glands in the diagrams correspond to M20x1.5 connections with non-Ex polyamide cable glands. Specifications without head transmitter installed. For ambient temperatures with head transmitter installed, see the 'Environment' section. $\rightarrow \cong 10$

As a special feature, Endress+Hauser offers terminal heads with optimized terminal accessibility for easy installation and maintenance.

| Compression fitting TK40 for weld-in | | | | | |
| A0018912 1 Movable 2 Fixed | Spherical Ferrule material PEEK or 316L Thread G¼" | 6.3 mm (0.25 in) for thermowell diameter Ød = 6 mm (0.236 in) | 25 mm (0.98 in) | 33 mm (1.3 in) | P_{max.} = 10 bar (145 psi), T_{max.} = +150 °C (+302 °F) for PEEK material, tightening torque = 10 Nm P_{max.} = 50 bar (725 psi), T_{max.} = +200 °C (+392 °F) for 316L material, tightening torque = 25 Nm PEEK ferrule has 3-A[®] symbol and EHEDG certification |

1) All the pressure specifications apply for cyclic temperature load

Minimum extension neck lengths, dependent on respective process connection

| Process connection | Extension next length T |
|---|---|
| NoneCompression fitting, movable | Predefined (cannot be selected, $T = 0$) |
| Thread according to ISO 228Compression fitting, fixedMetal sealing system | ≥ 82 mm (3.23 in) |
| Clamp according to ISO 2852 Sanitary connection according to DIN 11851 Varivent[®] SMS 1147 | ≥ 55 mm (2.17 in) |

Certificates and approvals

| CE mark | The product meets the requirements of the harmonized European standards. As such, it complies with the legal specifications of the EU directives. The manufacturer confirms successful testing of the product by affixing to it the CE mark. |
|--------------------------------|---|
| Hygiene standard | EHEDG certificate type EL - CLASS I. Permitted process connections in accordance with EHEDG, see 'Process connections' section → 16 3-A[®] certificate, authorization no. 1144, 3-A[®] sanitary standard 74-06. For process connections with 3-A[®] symbol, see "Process connections" section. → 16 ASME BPE, declaration of conformity, can be ordered for options indicated |
| Other standards and guidelines | IEC 60529: Degrees of protection provided by enclosures (IP code) IEC 61010-1: Safety requirements for electrical equipment for measurement, control and laboratory use IEC 60751: Industrial platinum resistance thermometers DIN EN 50446: Terminal heads |
| CRN approval | The CRN approval is only available for certain thermowell versions. These versions are identified and displayed accordingly during the configuration of the device. |
| | Detailed ordering information is available from the following sources: In the Download Area of the Endress+Hauser website: www.endress.com → Select your country → Downloads → Enter the product code or the device → Search field: approvals & certificates → Select the approval type → Run the search From your nearest Endress+Hauser sales organization: www.addresses.endress.com |
| Areas in contact with medium | The areas of the thermometer in contact with the medium comply with the following European regulations: (EC) No. 1935/2004, Article 3, paragraph 1, Articles 5 and 17 on materials and articles intended to come into contact with food. (EC) No. 2023/2006 on good manufacturing practice for materials and articles intended to come into contact with food. (EC) No. 10/2011 on plastic materials and articles intended to come into contact with food. |
| | FDA-compliantAll surfaces in contact with medium are produced without animal fats (ADI/TSE) |
| Surface roughness | Free from oil and grease for O ₂ applications, optional |
| Material resistance | Material resistance (including housing) to the following cleaning agents/disinfectants from the company Ecolab: P3-topax 66, P3-topactive 200, P3-topactive 500 and P3-topactive OKTO as well as demineralized water. |
| Material certification | The material certificate 3.1 (according to standard EN 10204) can be requested separately. The "short form" certificate includes a simplified declaration with no enclosures of documents related to the materials used in the construction of the single sensor and guarantees the traceability of the materials through the identification number of the thermometer. The data related to the origin of the materials can subsequently be requested by the client if necessary. |
| Calibration | The "Factory calibration" is carried out according to an internal procedure in a laboratory of Endress +Hauser accredited by the European Accreditation Organization (EA) to ISO/IEC 17025. A calibration which is performed according to EA guidelines (SIT/Accredia) or (DKD/DAkkS) may be requested separately. The calibration is performed on the replaceable insert of the thermometer. In the case of thermometers without a replaceable insert, the entire thermometer - from the process connection to the tip of the thermometer - is calibrated. |

Ordering information

Detailed ordering information is available from the following sources:

- In the Product Configurator on the Endress+Hauser website: www.endress.com -> Click "Corporate"
 -> Select your country -> Click "Products" -> Select the product using the filters and search field ->
 Open product page -> The "Configure" button to the right of the product image opens the Product
 Configurator.
- From your Endress+Hauser Sales Center: www.addresses.endress.com

Product Configurator - the tool for individual product configuration

- Up-to-the-minute configuration data
 - Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
 - Automatic verification of exclusion criteria
 - Automatic creation of the order code and its breakdown in PDF or Excel output format
 - Ability to order directly in the Endress+Hauser Online Shop

Accessories

Various accessories, which can be ordered with the device or subsequently from Endress+Hauser, are available for the device. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

Replaces weld-in adapter with order number 917969-1000. 1)

Replaces weld-in adapter with order number 215159-0000. 2)

3) AD2000: AD2000: The 316L material in contact with the process complies with AD2000 – W0/W2.

4) Inspection certificate as per EN10204-3.1 material

5)

One seal is included in the scope of delivery of the weld-in adapter. TSP modification number. Can only be ordered via FTSP, PTSP or NTSP. 6)

Maximum process pressure for the weld-in adapters:

- 25 bar (362 PSI) at maximum 150 °C (302 °F)
- 40 bar (580 PSI) at maximum 100 °C (212 °F)

For more information on weld-in adapters FTL20, FTL31, FTL33, FTL50, see Technical Information (TI00426F/00).

| Communication-specific accessories | Configuration kit TXU10 | Configuration kit for PC-programmable transmitter with setup software and interface cable for PC with USB port Order code: TXU10-xx |
|---------------------------------------|--------------------------------|---|
| | Commubox FXA195 HART | For intrinsically safe HART communication with FieldCare via the USB interface. For details, see "Technical Information" TI00404F |
| | Commubox FXA291 | Connects Endress+Hauser field devices with a CDI interface (= Endress+Hauser Common Data Interface) and the USB port of a computer or laptop. For details, see "Technical Information" TI00405C |
| | HART Loop Converter HMX50 | Is used to evaluate and convert dynamic HART process variables to analog current signals or limit values. For details, see "Technical Information" TI00429F and Operating Instructions BA00371F |
| | Wireless HART adapter SWA70 | Is used for the wireless connection of field devices. The WirelessHART adapter can be easily integrated into field devices and existing infrastructures, offers data protection and transmission safety and can be operated in parallel with other wireless networks with minimum cabling complexity. IF For details, see Operating Instructions BA061S |
| | Fieldgate FXA320 | Gateway for the remote monitoring of connected 4-20 mA measuring devices via a Web browser. For details, see "Technical Information" TI00025S and Operating Instructions BA00053S |

| Fieldgate FXA520 | Gateway for the remote diagnostics and remote configuration of connected HART measuring devices via a Web browser. |
|--------------------|---|
| | BA00051S |
| | |
| Field Xpert SFX100 | Compact, flexible and robust industry handheld terminal for remote configuration and for obtaining measured values via the HART current output (4-20 mA). |
| | For details, see Operating Instructions BA00060S |
| | |

| Service-specific accessories | Accessories | Description |
|------------------------------|--------------------------------------|--|
| | Applicator | Software for selecting and sizing Endress+Hauser measuring devices: Calculation of all the necessary data for identifying the optimum measuring device: e.g. pressure loss, accuracy or process connections. Graphic illustration of the calculation results |
| | | Administration, documentation and access to all project-related data and parameters over the entire life cycle of a project. |
| | | Applicator is available:Via the Internet: https://wapps.endress.com/applicatorOn CD-ROM for local PC installation. |
| | Configurator ^{+temperature} | Software for selecting and configuring the product depending on the measuring task, supported by graphics. Includes a comprehensive knowledge database and calculation tools: For temperature competence Quick and easy design and sizing of temperature measuring points Ideal measuring point design and sizing to suit the processes and needs of a wide range of industries |
| | | The Configurator is available: On request from your Endress+Hauser sales office on a CD-ROM for local PC installation. |
| | W@M | Life cycle management for your plant W@M supports you with a wide range of software applications over the entire process: from planning and procurement, to the installation, commissioning and operation of the measuring devices. All the relevant device information, such as the device status, spare parts and device-specific documentation, is available for every device over the entire life cycle. The application already contains the data of your Endress+Hauser device. Endress +Hauser also takes care of maintaining and updating the data records. |
| | | W@M is available: Via the Internet: www.endress.com/lifecyclemanagement On CD-ROM for local PC installation. |
| | FieldCare | FDT-based plant asset management tool from Endress+Hauser. It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition. |
| | | For details, see Operating Instructions BA00027S and BA00059S |

| System components | Accessories | Description |
|-------------------|--------------------------|---|
| | Field display unit RIA16 | The display unit records the analog measuring signal from the head transmitter and shows this on the display. The LC display shows the current measured value in digital form and as a bar graph indicating a limit value violation. The display unit is looped into the 4 to 20 mA circuit and gets the required energy from there. For details, see the "Technical Information" document TI00144R/09/en |
| | RN221N | Active barrier with power supply for safe separation of 4-20 mA standard signal circuits. Offers bidirectional HART transmission. |

| RNS221 | Supply unit for powering two 2-wire measuring devices solely in the non-Ex area. Bidirectional communication is possible via the HART communication jacks. | |
|--------|---|--|
| | For details, see "Technical Information" TI00081R and Brief Operating Instructions KA00110R | |
