

Operation Guide

UT35A/UT32A
Digital Indicating Controllers
Operation Guide

IM 05P01D31-11EN

Installation and Wiring

YOKOGAWA ♦
Yokogawa Electric Corporation

4th Edition : Apr. 2015

This operation guide describes installation, wiring, and other tasks required to make the controller ready for operation.

For details of each function, refer to the electronic manual. User's manuals can be downloaded or viewed at the following URL.

<http://www.yokogawa.com/ns/ut/im/>

Contents

- 1. Safety Precautions
- 2. Model and Suffix Codes
- 3. How to Install
- 4. Hardware Specifications
- 5. How to Connect Wires
- 6. Terminal Wiring Diagrams

Introduction

Thank you for purchasing the UT35A/UT32A Digital Indicating Controller. This operation guide describes the basic operations of the UT35A/UT32A. The guide should be provided to the end user of this product.

Be sure to read this operation guide before using the product in order to ensure correct operation.

For details of each function, refer to the electronic manual. Before using the product, refer to the table of Model and Suffix Codes to make sure that the delivered product is consistent with the model and suffix codes you ordered. Also make sure that the following items are included in the package.

- Digital Indicating Controller (the model you ordered).....x1
- Set of Brackets.....x1
- Unit Label (L4502VZ).....x1
- Tag Label (L4502VE).....x1
(Only when ordered.)
- Operation Guide (this document).....x6 (A3 size)
(Installation and Wiring, Initial Settings, Operations, and Parameters)

• Target Readers

This guide is intended for the following personnel:

- Engineers responsible for installation, wiring, and maintenance of the equipment.
- Personnel responsible for normal daily operation of the equipment.

1. Safety Precautions

The following symbol is used on the instrument. It indicates the possibility of injury to the user or damage to the instrument, and signifies that the user must refer to the user's manual for special instructions. The same symbol is used in the user's manual on pages that the user needs to refer to, together with the term "WARNING" or "CAUTION."

WARNING
Calls attention to actions or conditions that could cause serious or fatal injury to the user, and indicates precautions that should be taken to prevent such occurrences.

CAUTION
Calls attention to actions or conditions that could cause injury to the user or damage to the instrument or property and indicates precautions that should be taken to prevent such occurrences.

~ AC

□ The equipment wholly protected by double insulation or reinforced insulation.

— Functional grounding terminals
(Do not use this terminal as a protective grounding terminal).

Note

Identifies important information required to operate the instrument.

■ Warning and Disclaimer

- (1) YOKOGAWA makes no warranties regarding the product except those stated in the WARRANTY that is provided separately.
- (2) The product is provided on an "as is" basis. YOKOGAWA assumes no liability to any person or entity for any loss or damage, direct or indirect, arising from the use of the product or from any unpredictable defect of the product.

■ Safety, Protection, and Modification of the Product

- (1) In order to protect the system controlled by this product and the product itself, and to ensure safe operation, observe the safety precautions described in the user's manual. Use of the instrument in a manner not prescribed herein may compromise the product's functions and the protection features inherent in the device. We assume no liability for safety, or responsibility for the product's quality, performance or functionality should users fail to observe these instructions when operating the product.
- (2) Installation of protection and/or safety circuits with respect to a lightning protector; protective equipment for the system controlled by the product and the product itself; foolproof or fail-safe design of a process or line using the system controlled by the product or the product itself; and/or the design and installation of other protective and safety circuits are to be appropriately implemented as the customer deems necessary.
- (3) Be sure to use the spare parts approved by YOKOGAWA when replacing parts or consumables.
- (4) This product is not designed or manufactured to be used in critical applications that directly affect or threaten human lives. Such applications include nuclear power equipment, devices using radioactivity, railway facilities, aviation equipment, air navigation facilities, aviation facilities, and medical equipment. If so used, it is the user's responsibility to include in the system additional equipment and devices that ensure personnel safety.
- (5) Modification of the product is strictly prohibited.
- (6) This product is intended to be handled by skilled/trained personnel for electric devices.
- (7) This product is UL Recognized Component. In order to comply with UL standards, end-products are necessary to be designed by those who have knowledge of the requirements.

WARNING

● Power Supply
Ensure that the instrument's supply voltage matches the voltage of the power supply before turning ON the power.

● Do Not Use in an Explosive Atmosphere
Do not operate the instrument in locations with combustible or explosive gases or steam. Operation in such environments constitutes an extreme safety hazard. Use of the instrument in environments with high concentrations of corrosive gas (H₂S, SO_x, etc.) for extended periods of time may cause a failure.

● Do Not Remove Internal Unit
The internal unit should not be removed by anyone other than YOKOGAWA's service personnel. There are dangerous high voltage parts inside. Additionally, do not replace the fuse by yourself.

● Damage to the Protective Construction
Operation of the instrument in a manner not specified in the user's manual may damage its protective construction.

CAUTION
This instrument is an EMC class A product. In a domestic environment this product may cause radio interference in which case the user needs to take adequate measures.

2. Model and Suffix Codes

■ UT35A

Model	Suffix code	Optional suffix code	Description
UT35A			Digital Indicating Controller (Power supply: 100-240 V AC) (provided with retransmission output or 15 V DC loop power supply, 2 DIs, and 3 DOs)
Type 1: Basic control	-0		Standard type
	-1		Position proportional type
	-2		Heating/cooling type
Type 2: Functions	0		None
	1		2 additional DIs, 2 additional DOs
	2		5 additional DIs, 5 additional DOs
Type 3: Open networks	0		None
	1		RS-485 communication (Max.38.4 kbps, 2-wire/4-wire)
	2		Ethernet communication (with serial gateway function)
	3		CC-Link communication (with Modbus master function)
	4		PROFIBUS-DP communication (with Modbus master function)
	5		DeviceNet communication (with Modbus master function)
Display language (*1)	-1		English (Default. Can be switched to other language by the setting.)
	-2		German (Default. Can be switched to other language by the setting.)
	-3		French (Default. Can be switched to other language by the setting.)
	-4		Spanish (Default. Can be switched to other language by the setting.)
Case color	0		White (Light gray)
	1		Black (Light charcoal gray)
Fixed code	-00		Always "-00"
Optional suffix codes			
	/LP		24 V DC loop power supply (*2)
	/HA		Heater break alarm (*3)
	/DC		Power supply 24 V AC/DC
	/CT		Coating (*4)
	/CV		Terminal cover
	/MDL		Mount on DIN rail (without the display parts and keys) (please see the Operation Guide IM 05P01D81-01EN.)
	/RSP		Non-isolated remote input (please see the Operation Guide IM 05P01D31-81EN.)

*1: English, German, French, and Spanish are available for the guide display.

*2: The /LP option can be specified in the combination of Type 2 code (any of "0" or "1") and Type 3 code (any of "0" or "1".)

*3: The /HA option can be specified only when the Type 1 code is "-0" or "-2."

*4: When the /CT option is specified, the UT35A does not conform to the safety standards (UL and CSA) and CE marking (Products with /CT option are not intended for EEA-market).

■ UT32A

Model	Suffix code	Optional suffix code	Description
UT32A			Digital Indicating Controller (Power supply: 100-240 V AC) (provided with retransmission output or 15 V DC loop power supply, 2 DIs, and 3 DOs)
Type 1: Basic control	-0		Standard type
	-1		Position proportional type
	-2		Heating/cooling type
	-D		Dual-loop type (please see the Operation Guide IM 05P01D31-01EN.)
	-V		UT32A Digital Indicating Controller (Entry model) (please see the Operation Guide IM 05P01F31-01EN.)
	-C		
	-R		
Type 2: Functions	0		None
	1		RS-485 communication (Max. 38.4 kbps, 2-wire/4-wire) (*1)
	2		2 additional DIs and 2 additional DOs
Type 3: Open networks	0		None
	3		CC-Link communication (with Modbus master function) (*2)
Display language (*3)	-1		English (Default. Can be switched to other language by the setting.)
	-2		German (Default. Can be switched to other language by the setting.)
	-3		French (Default. Can be switched to other language by the setting.)
	-4		Spanish (Default. Can be switched to other language by the setting.)
Case color	0		White (Light gray)
	1		Black (Light charcoal gray)
Fixed code	-00		Always "-00"
Optional suffix codes			
	/LP		24 V DC loop power supply (*4)
	/HA		Heater break alarm (*5)
	/DC		Power supply 24 V AC/DC
	/CT		Coating (*6)
	/CV		Terminal cover
	/MDL		Mount on DIN rail (without the display parts and keys) (In case of the Standard type, the Position proportional type, or the Heating/cooling type, please see the Operation Guide IM 05P01D81-01EN. In case of the Dual-loop type, please see the Operation Guide IM 05P08D81-01EN.)
	/RSP		Non-isolated remote input (please see the Operation Guide IM 05P01D31-81EN.)

*1: When the /LP option is specified, the RS-485 communication of the Type 2 code "1" is 2-wire system.

*2: The Type 3 code "3" can be specified only when the Type 1 code is "-0" and the Type 2 code is "0."

*3: English, German, French, and Spanish are available for the guide display.

*4: The /LP option can be specified in the combination of Type 1 code (any of "-0" or "-1"), Type 2 code (any of "0" or "1") and Type 3 code "0."

*5: The /HA option can be specified in the combination of Type 1 code "-0" or "-2," and Type 3 code "0."

*6: When the /CT option is specified, the UT32A does not conform to the safety standards (UL and CSA) and CE marking (Products with /CT option are not intended for EEA-market).

3. How to Install

■ Installation Location

The instrument should be installed in indoor locations meeting the following conditions:

• Instrumented panel

This instrument is designed to be mounted in an instrumented panel. Mount the instrument in a location where its terminals will not inadvertently be touched.

• Well ventilated locations

Mount the instrument in well ventilated locations to prevent the instrument's internal temperature from rising.

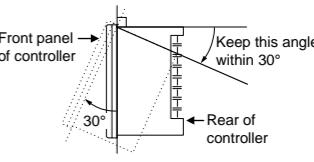

However, make sure that the terminal portions are not exposed to wind. Exposure to wind may cause the temperature sensor accuracy to deteriorate. To mount multiple indicating controllers, see the external dimensions/panel cutout dimensions which follow. If mounting other instruments adjacent to the instrument, comply with these panel cutout dimensions to provide sufficient clearance between the instruments.

• Locations with little mechanical vibration

Install the instrument in a location subject to little mechanical vibration.

• Horizontal location

Mount the instrument horizontally and ensure that it is level, with no inclination to the right or left.

Note

If the instrument is moved from a location with low temperature and low humidity to a place with high temperature and high humidity, or if the temperature changes rapidly, condensation will result. Moreover, in the case of thermocouple inputs, measurement errors will result. To avoid such a situation, leave the instrument in the new environment under ambient conditions for more than 1 hour prior to using it.

Do not mount the instrument in the following locations:

• Outdoors

• Locations subject to direct sunlight or close to a heater

Install the instrument in a location with stable temperatures that remain close to an average temperature of 23°C. Do not mount it in locations subject to direct sunlight or close to a heater. Doing so adversely affects the instrument.

• Locations with substantial amounts of oily fumes, steam, moisture, dust, or corrosive gases

The presence of oily fumes, steam, moisture, dust, or corrosive gases adversely affects the instrument. Do not mount the instrument in locations subject to any of these substances.

• Areas near electromagnetic field generating sources

Do not place magnets or tools that generate magnetism near the instrument. If the instrument is used in locations close to a strong electromagnetic field generating source, the magnetic field may cause measurement errors.

• Locations where the display is difficult to see

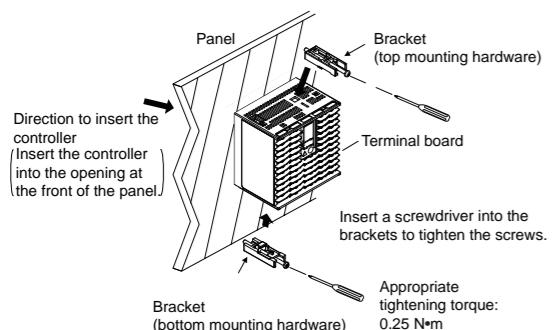

The instrument uses an LCD for the display unit, and this can be difficult to see from extremely oblique angles. Mount the instrument in a location where it can be seen as much as possible from the front.

• Areas close to flammable articles

Absolutely do not place the instrument directly on fl

■ Mounting the Instrument Main Unit

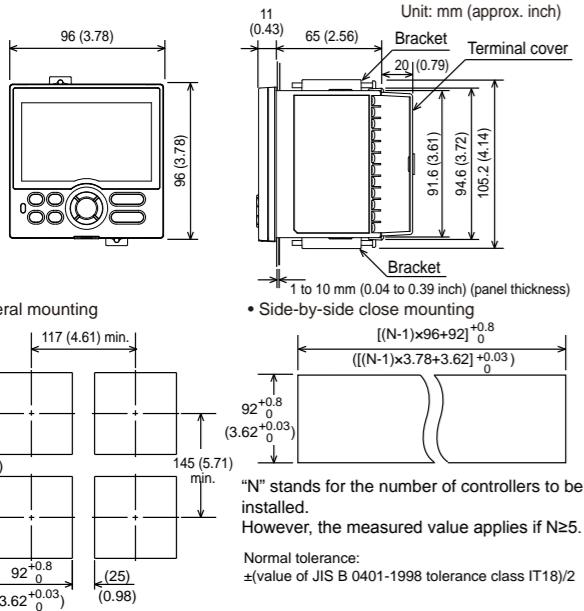

- Provide an instrument panel steel sheet of 1 to 10 mm thickness.
After opening the mounting hole on the panel, follow the procedures below to install the controller:
- 1) Insert the controller into the opening from the front of the panel so that the terminal board on the rear is at the far side.
 - 2) Set the brackets in place on the top and bottom of the controller as shown in the figure below, then tighten the screws of the brackets. Take care not to overtighten them.

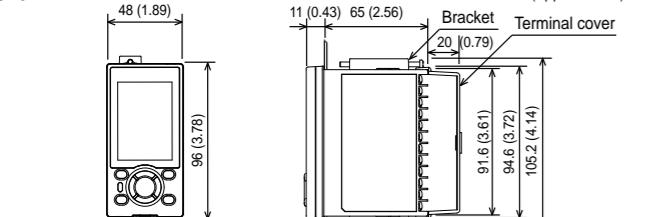

- Tighten the screws with appropriate tightening torque within 0.25 N·m. Otherwise it may cause the case deformation or the bracket damage.
- Make sure that foreign materials do not enter the inside of the instrument through the case's slit holes.

UT35B

4. Hardware Specifications

This instrument is for Measurement Category No.1.
Do not use it for measurements in locations falling under Measurement Categories No.2, No.3, and No.4.

Category	IEC/EN/CSA-UL 61010-1: 2001	EN 61010-2-030	Remarks
No.1	Measurement Category I	O (Other)	For measurements performed on circuits not directly connected to MAINS.
No.2	Measurement Category II	Measurement Category II	For measurements performed on circuits directly connected to the low-voltage installation.
No.3	Measurement Category III	Measurement Category III	For measurements performed in the building installation.
No.4	Measurement Category IV	Measurement Category IV	For measurements performed at the source of the low-voltage installation.

■ Input Specifications

● Universal Input (Equipped as standard)

- Number of inputs: 1
- Input type, instrument range, and measurement accuracy: See the table below,

Input Type	Instrument Range		Accuracy
	°C	°F	
Thermocouple	K	-270.0 to 1370.0°C -270.0 to 1000.0°C -200.0 to 500.0°C	±0.1% of instrument range ±1 digit for 0°C or more ±0.2% of instrument range ±1 digit for less than 0°C
	J	-200.0 to 1200.0°C -270.0 to 400.0°C	±2% of instrument range ±1 digit for less than -200.0°C of thermocouple K ±1% of instrument range ±1 digit for less than -200.0°C of thermocouple T
	T	0.0 to 400.0°C	±0.15% of instrument range ±1 digit for 400°C or more ±5% of instrument range ±1 digit for less than 400°C
	B	0.0 to 1800.0°C	±0.15% of instrument range ±1 digit for 400°C or more ±5% of instrument range ±1 digit for less than 400°C
	S	0.0 to 1700.0°C	±0.15% of instrument range ±1 digit
	R	0.0 to 1700.0°C	±0.15% of instrument range ±1 digit
	N	-200.0 to 1300.0°C -200.0 to 2400.0°F	±0.1% of instrument range ±1 digit ±0.25% of instrument range ±1 digit for less than 0°C
	E	-270.0 to 1000.0°C -200.0 to 900.0°C	±0.1% of instrument range ±1 digit for 0°C or more ±0.2% of instrument range ±1 digit for less than 0°C
	L	-200.0 to 400.0°C	The accuracy is that in the standard operating conditions: 23±2°C, 55±10%RH, and power frequency at 50/60 Hz.
	U	0.0 to 400.0°C	±1.5% of instrument range ±1 digit for less than -200.0°C of thermocouple E.
RTD	W	0.0 to 2300.0°C	±0.2% of instrument range ±1 digit (Note 2)
	Platinel 2	0.0 to 1390.0°C	±0.1% of instrument range ±1 digit
	PR20-40	0.0 to 1900.0°C	±0.5% of instrument range ±1 digit for 800°C or more Accuracy is not guaranteed for less than 800°C.
	W97Re3-W75Re25	0.0 to 2000.0°C	±0.2% of instrument range ±1 digit
	JPt100	-200.0 to 500.0°C -150.0 to 150.0°C	±0.1% of instrument range ±1 digit (Note 1)
	Pt100	-200.0 to 850.0°C -200.0 to 500.0°C	±0.1% of instrument range ±1 digit (Note 1)
	Standard signal	0.400 to 2.000 V 1.000 to 5.000 V 4.00 to 20.00 mA	The accuracy is that in the standard operating conditions: 23±2°C, 55±10%RH, and power frequency at 50/60 Hz.
	DC voltage/current	0.000 to 2.000 V 0.000 to 10.00 V 0.000 to 20.00 mA -10.00 to 20.00 mV 0.0 to 100.0 mV	This is not conversion accuracy through input and output but the performance of transmission output itself.

The accuracy is that in the standard operating conditions: 23±2°C, 55±10%RH, and power frequency at 50/60 Hz.

Note 1: ±0.3°C ±1 digit in the range between 0 and 100°C, ±0.5°C ±1 digit in the range between -100 and 200°C.

Note 2: W: W-5% Re/W-26% Re(Hoskins Mfg.Co.). ASTM E988

- Input sampling (control) period: 200 ms

- Burnout detection:

Functions at TC, RTD, and standard signal.
Upscale, downscale, and off can be specified.

For standard signal, burnout is determined to have occurred if it is 0.1 V or 0.4 mA or less.

• Input bias current: 0.05 μA (for TC or RTD)

• Measured current (RTD): About 0.16 mA

• Input resistance:

TC or mV input: 1 MΩ or more

V input: About 1 MΩ

mA input: About 250 Ω

- Allowable signal source resistance:

TC or mV input: 250 Ω or less

Effects of signal source resistance: 0.1 μV/Ω or less

DC voltage input: 2 kΩ or less

Effects of signal source resistance: About 0.01%/100 Ω

- Allowable wiring resistance:

RTD input: Max. 150 Ω/wire (The conductor resistance between the three wires shall be equal.)
Wiring resistance effect: ±0.1°C/10 Ω

- Allowable input voltage/current:

TC, mV, mA and RTD input: ±10 V DC

V input: ±20 V DC

mA input: ±40 mA

- Noise rejection ratio:

Normal mode: 40 dB or more (at 50/60 Hz)

Common mode: 120 dB or more (at 50/60 Hz)

For 100-240 V AC, the power frequency can be set manually. Automatic detection is also available.
For 24 V AC/DC, the power frequency can be set manually.

- Reference junction compensation error:

±1.0°C (15 to 35°C), ±1.5°C (-10 to 15°C and 35 to 50°C)

- Applicable standards: JIS/IEC/DIN (ITS-90) for TC and RTD

Note: The control output should always be used with a load of 10 mA or more.
The alarm output should always be used with a load of 1 mA or more.

■ Transistor Contact Output Specifications

- Number of outputs: See the table of Model and Suffix Codes.

• Output type: Open collector (SINK current)

• Output contact rating: Max. 24 V DC, 50 mA

• Output time resolution: Min. 200 ms

• Use: Alarm output, FAIL output, etc.

■ Position Proportional Output Specifications

- Position signal input:

Slide resistance: 100 Ω to 2.5 kΩ of total resistance

100% side and slide line: with disconnection detection

0% side: without disconnection detection

Current input: 4 to 20 mA (with disconnection detection)

- Sampling period: 50 ms

• Measurement resolution: 0.1% of input span

- Position proportional relay output:

UT35A: contact point 1a; 2 points, 250 V AC, 3 A or 30 V DC, 3 A (resistance load)

UT32A: contact point 1a; 2 points, 240 V AC, 3 A or 30 V DC, 3 A (resistance load)

Note: This should always be used with a load of 10 mA or more.

■ Heater Break Alarm Specifications

- Number of inputs: 2

• Number of outputs: 2 (transistor contact output)

• Use: Measures the heater current using an external current transformer (CT) and generates a heater break alarm when the measured value is less than the break detection value.

• Current transformer input resistance: About 9.4 Ω

• Current transformer input range: 0.0 to 0.1 Arms (0.12 Arms or more cannot be applied.)

• Heater current setting range: OFF, 0.1 to 300.0 Arms

Heater current measured value display range: 0.0 to 360.0 Arms

Note: The CT ratio can be set. CT ratio setting range: 1 to 3300

• Recommended CT: CT from U.R.D., Ltd.

CTL-6-S-H: CT ratio 800, measurable current range: 0.1 to 80.0 Arms

CTL-12L-30: CT ratio 3000, measurable current range: 0.1 to 180.0 Arms

• Heater current measurement period: 200 ms

• Heater current measurement accuracy: ±5% of current transformer input range span ±1 digit (CT error is not included.)

• Heater current detection resolution: Within 1/250 of current transformer input range span

• Break detection On-time: Min. 0.2 second (for time proportional output)

■ 24 V DC Loop Power Supply Specifications

- Use: Power is supplied to a 2-wire transmitter.

• Power supply: 21.6 to 28.0 V DC

• Rated current: 4 to 20 mA DC

• Maximum supply current: About 30 mA (with short-circuit current limiting circuit.)

■ Safety and EMC Standards

- Safety:

Compliant with IEC/EN61010-1 (CE), IEC/EN61010-2-030 (CE), approved by CAN/CSA C22.2 No. 61010-1 (CSA), approved by UL61010-1.

- Installation: Direct panel mounting; mounting bracket, one each for upper and lower mounting
- Panel cutout dimensions (mm):
 - UT35A: $92^{+0.80}_{-0.80}$ (W) \times $92^{+0.80}_{-0.80}$ (H)
 - UT32A: $45^{+0.60}_{-0.60}$ (W) \times $92^{+0.80}_{-0.80}$ (H)
- Mounting attitude: Up to 30 degrees above the horizontal. No downward titling allowed.
- Wiring: M3 screw terminal with square washer (for signal wiring and power wiring)

■ Power Supply Specifications and Isolation

- Power supply:
 - Rated voltage: 100-240 V AC (+10%/-15%), 50/60 Hz
 - 24 V AC/DC (+10%/-15%) (for /DC option)
- Power consumption: UT35A: 18 VA (DC: 9 VA, AC: 14 VA if /DC option is specified)
UT32A: 15 VA (DC: 7 VA, AC: 11 VA if /DC option is specified)
- Data backup: Nonvolatile memory
- Power holdup time: 20 ms (for 100 V AC drive)
- Withstanding voltage
 - Between primary terminals and secondary terminals: 2300 V AC for 1 minute (UL, CSA)
 - Between primary terminals and secondary terminals: 3000 V AC for 1 minute (CE)
 - Between primary terminals: 1500 V AC for 1 minute
 - Between secondary terminals: 500 V AC for 1 minute
 - (Primary terminals: Power* and relay output terminals; Secondary terminals: Analog I/O signal terminals, contact input terminals, communication terminals and functional grounding terminals.)
- *: Power terminals for 24V AC/DC models are the secondary terminals.
- Insulation resistance: Between power supply terminals and a grounding terminal 20 MΩ or more at 500 V DC
- Isolation specifications

PV (universal) input terminals	Internal circuits	Power supply
Control, retransmission (analog) output terminals (not isolated between the analog output terminals)		
Valve position (feedback) input terminals		
Control relay (contact point c/contact point a x 2) output terminals		
Alarm-1 relay (contact point a) output terminals		
Alarm-2 relay (contact point a) output terminals		
Alarm-3 relay (contact point a) output terminals		
Position proportional relay output terminals		
Contact input terminals (all) RS-485 communication terminals (2 ports)		
24 V DC loop power supply terminals		
Contact output (transistor) terminals		
Ethernet communication terminal		
PROFIBUS-DP/DeviceNet/CC-Link communication terminals		
Current transformer input terminals		

The circuits divided by lines are insulated mutually.

■ Environmental Conditions

Normal Operating Conditions:

- Ambient temperature: -10 to 50°C (side-by-side mounting: -10 to 40 °C)
If the CC-Link option is specified, 0 to 50 °C for UT35A; 0 to 40 °C for UT32A.
(side-by-side mounting: 0 to 40 °C for UT35A/UT32A with CC-Link option)
- Ambient humidity: 20 to 90% RH (no condensation allowed)
- Magnetic field: 400 A/m or less
- Continuous vibration at 5 to 9 Hz: Half amplitude of 1.5 mm or less, 1oct/min for 90 minutes each in the three axis directions
- Continuous vibration at 9 to 150 Hz: 4.9 m/s² or less, 1oct/min for 90 minutes each in the three axis directions
- Short-period vibration: 14.7 m/s², 15 seconds or less
- Shock: 98 m/s² or less, 11 ms
- Altitude: 2000 m or less above sea level
- Warm-up time: 30 minutes or more after the power is turned on
- Startup time: Within 10 seconds

*: The LCD (a liquid crystal display) is used for a display portion of this product.
The LCD has a characteristic that the display action becomes late at the low temperature. However, the control function is not affected.

Transportation and Storage Conditions:

- Temperature: -25 to 70°C
- Temperature change rate: 20°C/h or less
- Humidity: 5 to 95% RH (no condensation allowed)

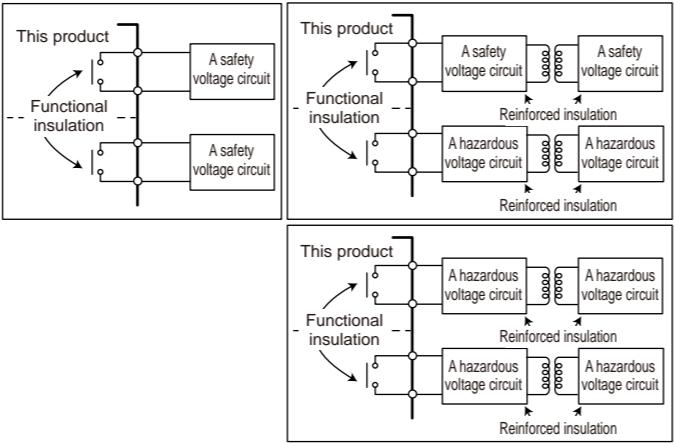

Effects of Operating Conditions

- Effect of ambient temperature:
 - Voltage or TC input: $\pm 1 \mu\text{V}/^\circ\text{C}$ or $\pm 0.01\%$ of F.S./°C, whichever is larger
 - Current input: $\pm 0.01\%$ of F.S./°C
 - RTD input: $\pm 0.05\%$ /°C (ambient temperature) or less
 - Analog output: $\pm 0.02\%$ of F.S./°C or less
- Effect of power supply voltage fluctuation
 - Analog input: $\pm 0.05\%$ of F.S. or less
 - Analog output: $\pm 0.05\%$ of F.S. or less
 - (Each within rated voltage range)

5. How to Connect Wires

- Wiring work must be carried out by a person with basic electrical knowledge and practical experience.
- Be sure to turn OFF the power supply to the controller before wiring to avoid an electric shock. Use a tester or similar device to ensure that no power is being supplied to a cable to be connected.
- As a safety measure, always install a circuit breaker (an IEC 60947-compatible product, 5 A, 100 V or 220 V AC) in an easily accessible location near the instrument. Moreover, provide indication that the switch is a device for turning off the power to the instrument.
- Install the power cable keeping a distance of more than 1 cm from other signal wires.
- The power cable is required to meet the IEC standards concerned or the requirements of the area in which the instrument is being installed.
- Wiring should be installed to conform to NEC (National Electrical Code: ANSI/NFPA-70) or the wiring construction standards in countries or regions where wiring will be installed.
- For control relay output, alarm relay output, and power terminal connections, use heat-resistant cables.
- Since the insulation provided to each relay output terminal is Functional insulation, provide Reinforced insulation to the external of the device as necessary. (Refer to the drawing below.)

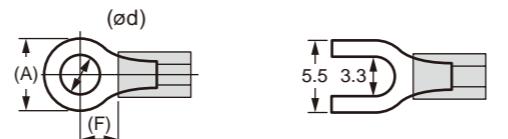

- When connecting two or more crimp-on terminal lugs to the single terminal block, bend the crimp-on terminal lugs before tightening the screw.
- Note that the wiring of two or more crimp-on terminal lugs to the single high-voltage terminal of the power supply and relay, etc. does not comply with the safety standard.

- Provide electricity from a single-phase power supply. If the power is noisy, install an isolation transformer on the primary side, and use a line filter on the secondary side. When measures against noise are taken, do not install the primary and secondary power cables close to each other.
- If there is a risk of external lightning surges, use a lightning arrester etc.
- For TC input, use shielded compensating lead wires for wiring. For RTD input, use shielded wires that have low conductor resistance and cause no significant differences in resistance between the three wires.
- Since the control output relay has a life span (resistance load of 100,000 times), use the auxiliary relay to perform ON/OFF control.
- The use of inductance (L) loads such as auxiliary relays, motors and solenoid valves causes malfunction or relay failure; always insert a CR filter for use with alternating current or a diode for use with direct current, as a spark-removal surge suppression circuit, into the line in parallel with the load.
- After completing the wiring, the terminal cover is recommended to use for the instrument.

● Recommended Crimp-on Terminal Lugs

Recommended tightening torque: 0.6 N·m
Applicable wire size: Power supply wiring 1.25 mm² or more

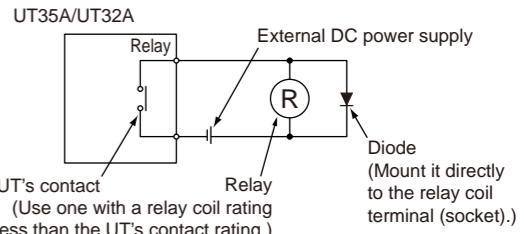

Applicable terminal lug	Applicable wire size mm ² (AWG#)	(ød)	(A)	(F)
M3	0.25 to 1.65 (22 to 16)	3.3	5.5	4.2

● Cable Specifications and Recommended Cables

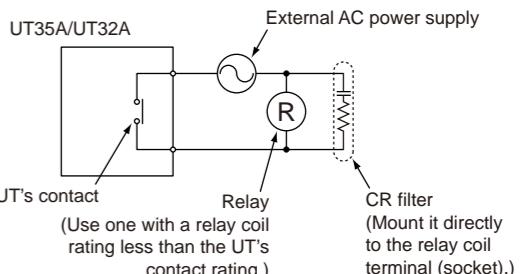

Purpose	Name and Manufacturer
Power supply, relay contact outputs	600 V Grade heat-resistant PVC insulated wires, JIS C 3317(HIV), 0.9 to 2.0 mm ²
Thermocouple	Shielded compensating lead wires, JIS C 1610 For thermocouple input (PV input and remote input with direct input), shielded compensating lead wire of cross-sectional area less than or equal to 0.75 mm ² is recommended. If the cross-sectional area is wide, the reference junction compensation error may be large.
RTD	Shielded wires (three/four conductors), UL2482 (Hitachi Cable)
Other signals (other than contact input/output)	Shielded wires
Other signals (contact input/output)	Unshielded wires
RS-485 communication	Shielded wires
Ethernet communication	100 BASE-TX (CAT-5)/10 BASE-T
PROFIBUS-DP communication	Dedicated cable for PROFIBUS-DP (Shielded two-wires)
DeviceNet communication	Dedicated cable for DeviceNet (Shielded five-wires)
CC-Link communication	Dedicated cable for CC-Link (Shielded three-wires)

PROFIBUS-DP/CC-Link Connector (wiring side) (Part number: A1987JT)
DeviceNet Connector (wiring side) (Part number: L4502BW)
Recommended tightening torque: 0.5 to 0.6 N·m

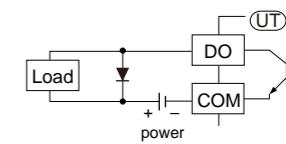

DC Relay Wiring

AC Relay Wiring

Transistor Output Wiring

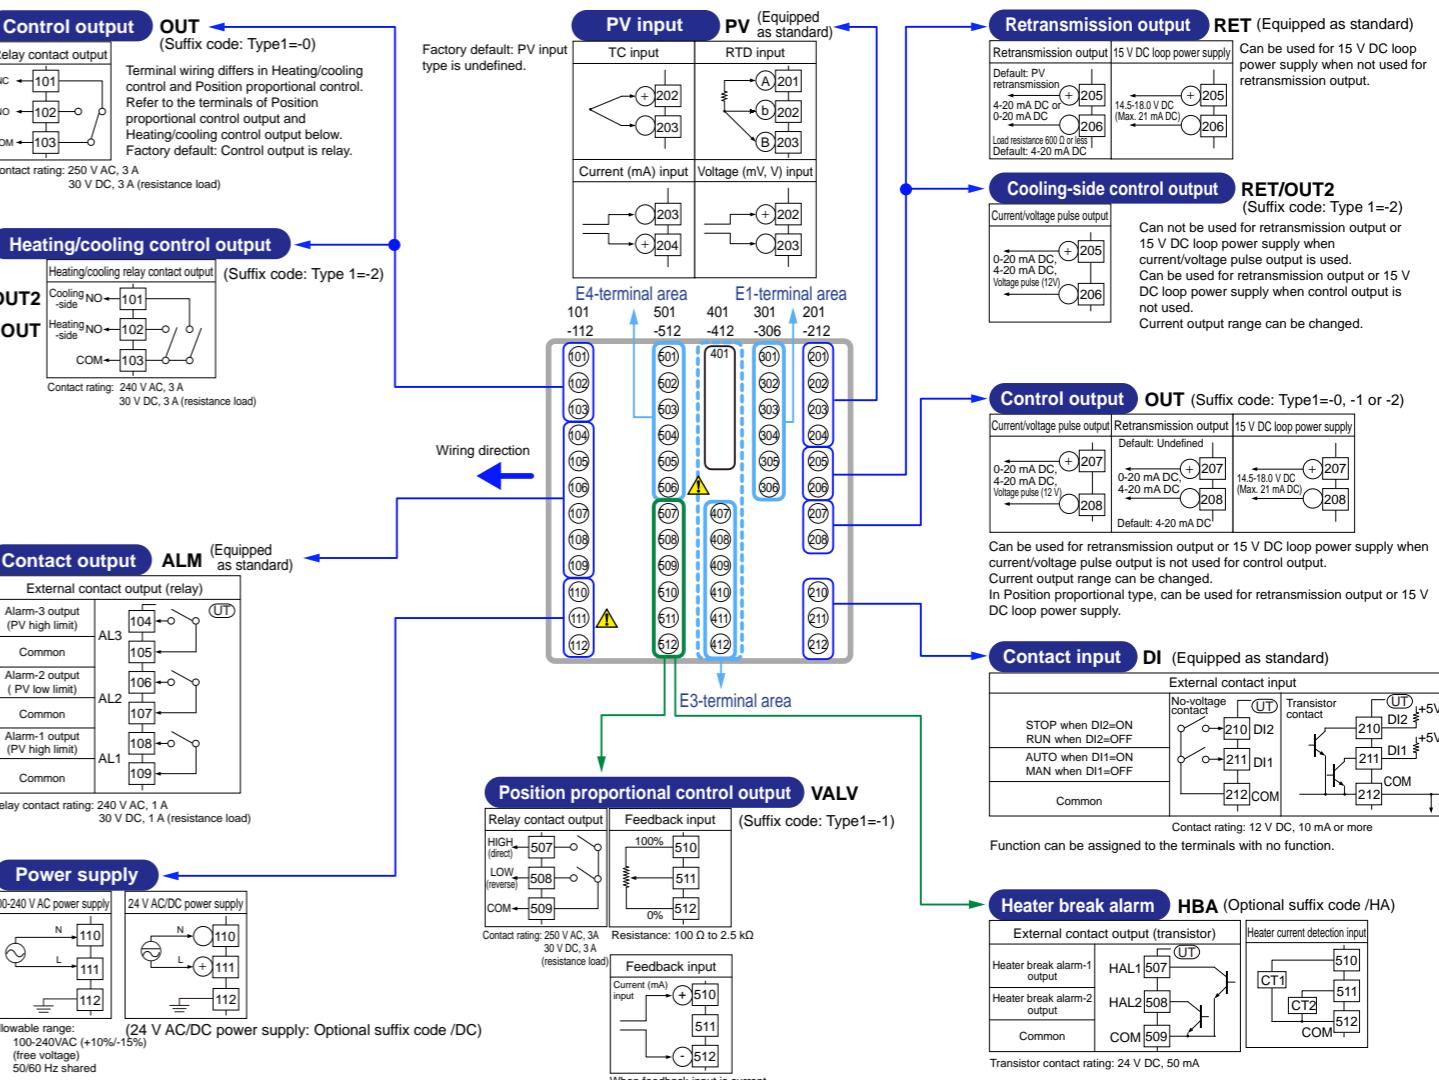

6. Terminal Wiring Diagrams

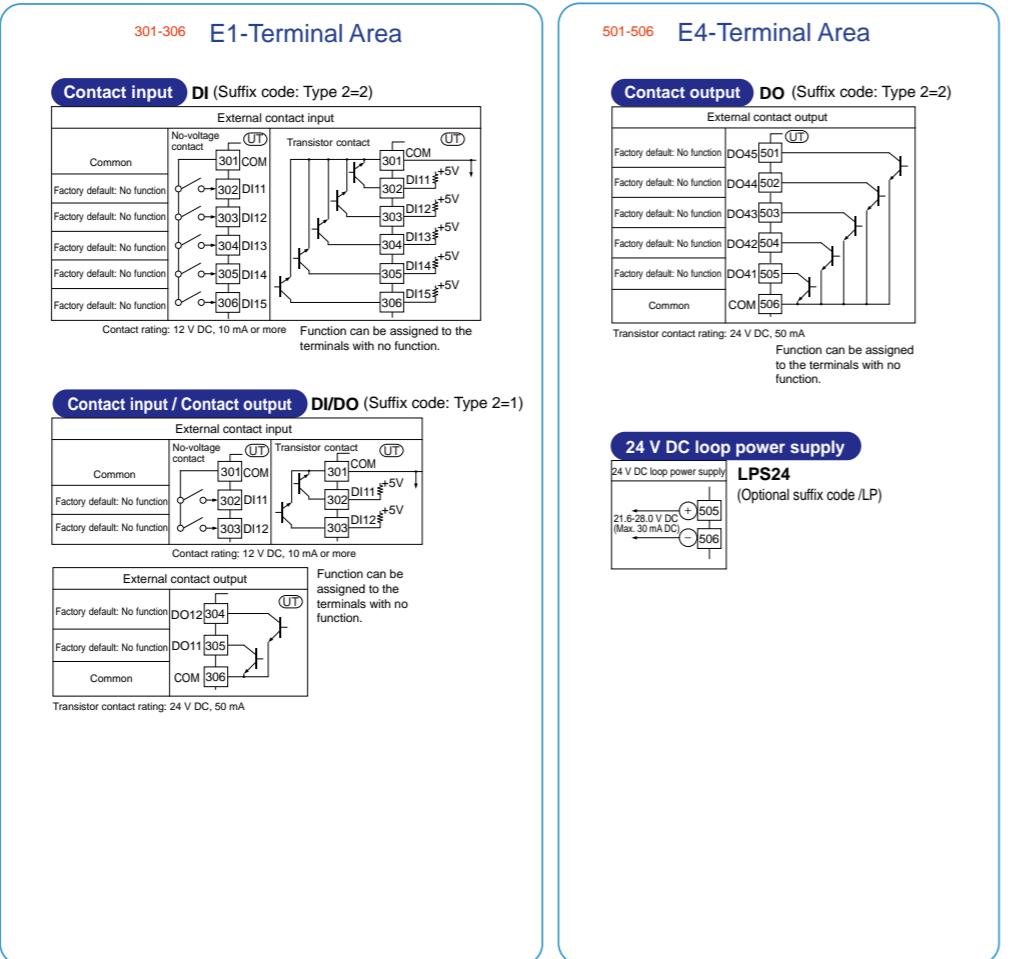

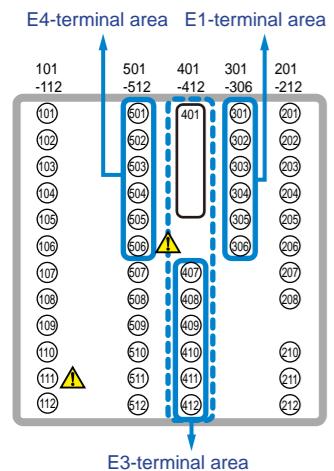

- Do not use an unassigned terminal as the relay terminal.
- Do not use a 100-240 V AC power supply for the 24 V AC/DC model; otherwise, the instrument will malfunction.

Functional Enhancement

Initial Settings

YOKOGAWA ♦

Yokogawa Electric Corporation

This operation guide describes basic settings and operations of the UT35A/UT32A. For details of each function, see the electronic manual.

The scrolling guide is displayed on PV display in the Parameter Setting Display.

This guide can be turned on/off with the Fn key.

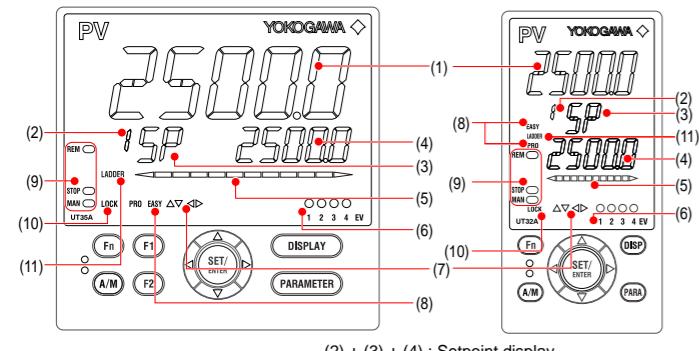

For details of the each function, refer to the electronic manual. User's manuals can be downloaded or viewed at the following URL.

- Setting Alarm Type
- Setting Alarm Setpoint

1. Names and Functions of Display Parts

(2) + (3) + (4) : Setpoint display

No. in figure	Name	Description												
(1)	PV display (white or red)	Displays PV. Displays an error code if an error occurs. Displays the scrolling guide in the Menu Display and Parameter Setting Display when the guide display ON/OFF is set to ON.												
(2)	Group display (green)	Displays a group number (1 to 4 or R) and terminal area (E1 to E4). 1 to 4 represent SP numbers in the Operation Display. R and E1 to E4 are displayed in the Parameter Setting Display.												
(3)	Symbol display (orange)	Displays a parameter symbol.												
(4)	Data display (orange)	Displays a parameter setpoint and menu symbol.												
(5)	Bar-graph display (orange)	Displays control output value (OUT) and measured input value (PV). The data to be displayed can be set by the parameter. Initial value: Deviation, Heating-side control output (in Heating/cooling control)												
(6)	Event indicator (orange)	Lit when the alarms 1 to 4 occur. Event displays other than alarms can be set by the parameter.												
(7)	Key navigation indicator (green)	Lit or blinks when the Up/Down or Left/Right arrow key operation is possible.												
(8)	Parameter display level indicator (green)	Displays the setting conditions of the parameter display level function.												
	Parameter display level indicator (green)	<table border="1"> <thead> <tr> <th>Parameter display level</th> <th>EASY</th> <th>PRO</th> </tr> </thead> <tbody> <tr> <td>Easy setting mode</td> <td>Lit</td> <td>Unit</td> </tr> <tr> <td>Standard setting mode</td> <td>Unit</td> <td>Unit</td> </tr> <tr> <td>Professional setting mode</td> <td>Unit</td> <td>Lit</td> </tr> </tbody> </table>	Parameter display level	EASY	PRO	Easy setting mode	Lit	Unit	Standard setting mode	Unit	Unit	Professional setting mode	Unit	Lit
Parameter display level	EASY	PRO												
Easy setting mode	Lit	Unit												
Standard setting mode	Unit	Unit												
Professional setting mode	Unit	Lit												
(9)	Status indicator (green and red)	Displays the operating conditions and control status.												
	Status indicator (green and red)	<table border="1"> <thead> <tr> <th>Indicator</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>REM</td> <td>Lit when in remote mode (REM).</td> </tr> <tr> <td>STOP</td> <td>Lit when in stop mode (STOP).</td> </tr> <tr> <td>MAN</td> <td>Lit when in manual mode (MAN). Blinks during auto-tuning.</td> </tr> </tbody> </table>	Indicator	Description	REM	Lit when in remote mode (REM).	STOP	Lit when in stop mode (STOP).	MAN	Lit when in manual mode (MAN). Blinks during auto-tuning.				
Indicator	Description													
REM	Lit when in remote mode (REM).													
STOP	Lit when in stop mode (STOP).													
MAN	Lit when in manual mode (MAN). Blinks during auto-tuning.													
(10)	Security indicator (red)	Lit if a password is set. The setup parameter settings are locked.												
(11)	Ladder operation indicator (green)	Lit while the ladder operation is executed.												

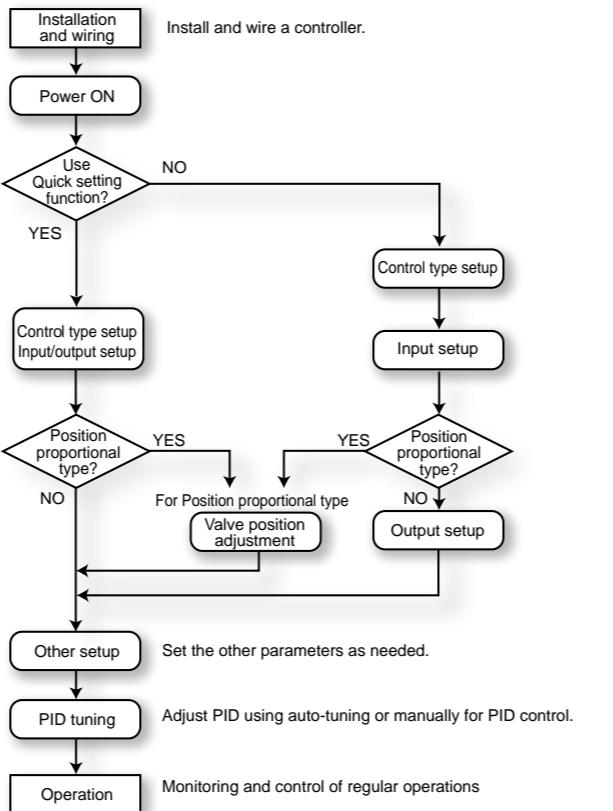

No. in figure	Name	Description
(1)	UT35A: DISPLAY key UT32A: DISP key	Used to switch the Operation Displays. Press the key in the Operation Display to switch the provided Operation Displays. Press the key in the Menu Display or Parameter Setting Display to return to the Operation Display.
(2)	UT35A: PARAMETER key UT32A: PARA key	Hold down the key for 3 seconds to move to the Operation Parameter Setting Display. Hold down the key and the Left arrow key simultaneously for 3 seconds to move to the Setup Parameter Setting Display. Press the key in the Parameter Setting Display to return to the Menu Display. Press the key once to cancel the parameter setting (setpoint is blinking).
(3)	SET/ENTER key Up/Down/Left/Right arrow keys	SET/ENTER key Press the key in the Menu Display to move to the Parameter Setting Display of the Menu. Press the key in the Parameter Setting Display to transfer to the parameter setting mode (setpoint is blinking), and the parameter can be changed. Press the key during parameter setting mode to register the setpoint. Up/Down/Left/Right arrow keys Press the Left/Right arrow keys in the Menu Display to switch the Displays. Press the Up/Down/Left/Right arrow keys in the Parameter Setting Display to switch the Displays. Press the Up/Down arrow keys during parameter setting mode (setpoint is blinking) to change a setpoint. Press the Left/Right arrow keys during parameter setting mode (setpoint is blinking) to move between digits according to the parameter.
(4)	Light-loader interface	It is the communication interface for the adapter cable used when setting and storing parameters from a PC. The LL50A Parameter Setting Software (sold separately) is required.
(5)	A/M key	Used to switch between AUTO and MAN modes. The setting is switched between AUTO and MAN each time the key is pressed.
(6)	User function keys	The UT35A has F1, F2, and Fn keys. The UT32A has only the Fn key. The user can assign a function to the key. The function is set by the parameter.

Note: The communication connector (maintenance port) for LL50A Parameter Setting Software is on the top of the unit.

2. Setup Procedure

The following flowchart shows the setup procedure for UT35A/UT32A.

3. Quick Setting Function (Setting of Input and Output)

The Quick setting function is a function to easily set the basic function of the controller.

Turn on the controller to start the Quick setting function.

This function allows you to easily set the control type, input, and output, and quickly start the control action.

The items (parameters) to be set by Quick setting function are as follows.

- Control type (PID control, Heating/cooling control, etc.)
- Input function (PV input type, range, scale (at voltage input), etc.)
- Output function (control output type and cycle time)

After turning on the controller, first decide whether or not to use the Quick setting function.

Operation in Initial Display

- Press the SET/ENTER key while YES is displayed to start the Quick setting function.
- If you change YES to NO and press the SET/ENTER key, Operation Display will appear without starting the Quick setting function.

Operation for Setting

- To select the parameter setting displayed as the initial value, press the Down arrow key to move to the next parameter.

To change and set the parameter setting, press the SET/ENTER key to start the setpoint blinking. The blinking state allows you to make changes (setting mode). Use the Up/Down/Left/Right arrow keys to change the setpoint. Press the SET/ENTER key to register the setting.

■ Making Settings Using Quick Setting Function

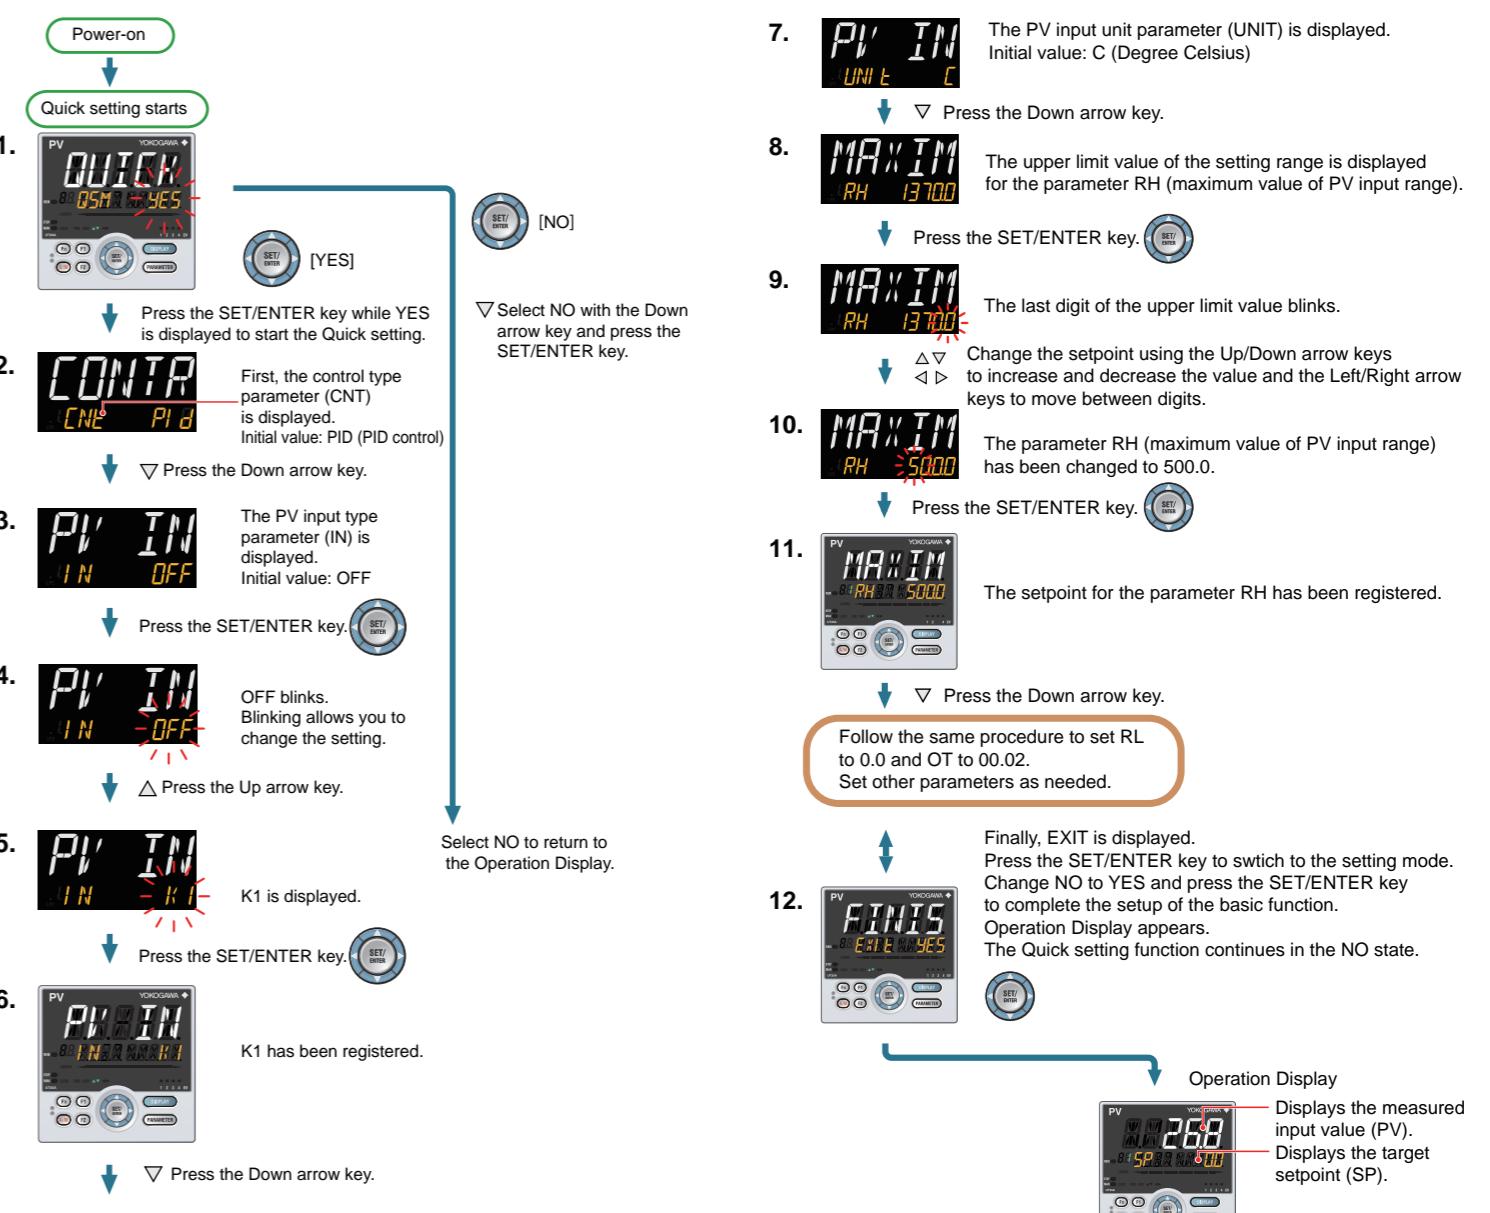

Example: Setting to PID control, thermocouple type K (range of 0.0 to 500.0°C), and current control output

For the detailed procedure and switching of displays, see "Flow of Quick Setting Function" below. For the parameters to set, see the next page.

- Press the SET/ENTER key while YES for QSM (Quick setting mode) is displayed.
- Set the control type parameter (CNT) to PID (PID control).
- Set the PV input type parameter (IN) to K1 (-270.0 to 1370.0 °C).
- Set the PV input unit parameter (UNIT) to C (Degree Celsius).
- Set the maximum value of PV input range parameter (RH) to 500.0.
- Set the minimum value of PV input range parameter (RL) to 0.0.
- Set the output type selection parameter (OT) to OUT terminals (current=00.02).
- Finally, EXIT is displayed. Change NO to YES and press the SET/ENTER key to complete the setup. Operation Display appears.

■ Flow of Quick Setting Function

In Quick setting mode, the parameter guide appears on PV display.
This guide can be turned on/off with the Fn key.

■ Parameters to be set

Control Type

Parameter Symbol	Name of Parameter	Setting Range
CNT	Control type	PID: PID control ONOF: ON/OFF control (1 point of hysteresis) ONOF2: ON/OFF control (2 points of hysteresis) 2P2L: Two-position two-level control H/C: Heating/cooling control

Note: Some setpoints may not be displayed depending on the model and suffix codes.

Input Function

Parameter Symbol	Name of Parameter	Setting Range
IN	PV input type	OFF: Disable K1: -270.0 to 1370.0 °C / -450.0 to 2500.0 °F K2: -270.0 to 1000.0 °C / -450.0 to 2300.0 °F K3: -200.0 to 500.0 °C / -200.0 to 1000.0 °F J: -200.0 to 1200.0 °C / -300.0 to 2300.0 °F T1: -270.0 to 400.0 °C / -450.0 to 750.0 °F T2: 0.0 to 400.0 °C / -200.0 to 750.0 °F B: 0.0 to 1800.0 °C / 32 to 3300 °F S: 0.0 to 1700.0 °C / 32 to 3100 °F R: 0.0 to 1700.0 °C / 32 to 3100 °F N: -200.0 to 1300.0 °C / -300.0 to 2400.0 °F E: -270.0 to 1000.0 °C / -450.0 to 1800.0 °F L: -200.0 to 900.0 °C / -300.0 to 1600.0 °F U1: -200.0 to 400.0 °C / -300.0 to 750.0 °F U2: 0.0 to 400.0 °C / -200.0 to 1000.0 °F W: 0.0 to 2300.0 °C / 32 to 4200 °F PL2: 0.0 to 1390.0 °C / 32 to 2500.0 °F P2040: 0.0 to 1900.0 °C / 32 to 3400 °F WRE: 0.0 to 2000.0 °C / 32 to 3600 °F JPT1: -200.0 to 500.0 °C / -300.0 to 1000.0 °F JPT2: -150.00 to 150.00 °C / -200.0 to 300.0 °F PT1: -200.0 to 850.0 °C / -300.0 to 1560.0 °F PT2: -200.0 to 500.0 °C / -300.0 to 1000.0 °F PT3: -150.00 to 150.00 °C / -200.0 to 300.0 °F 0.4V: 0.400 to 2.000 V 1-5V: 1.000 to 5.000 V 4-20: 4.00 to 20.00 mA 0-2V: 0.000 to 2.000 V 0-10V: 0.00 to 10.00 V 0-20: 0.00 to 20.00 mA -1020: -10.00 to 20.00 mV 0-100: 0.0 to 100.0 mV
UNIT	PV input unit	-: No unit, C: Degree Celsius -: No unit, -: No unit, --: No unit, F: Degree Fahrenheit
RH	Maximum value of PV input range	Depends on the input type. - For temperature input - Set the temperature range that is actually controlled. (RL<RH). - For voltage / current input - Set the range of a voltage / current signal that is applied. The scale across which the voltage / current signal is actually controlled should be set using the maximum value of input scale (SH) and minimum value of input scale (SL). (Input is always 0% when RL = RH.)
RL	Minimum value of PV input range	PV input scale SDP Maximum value of PV input scale SH Minimum value of PV input scale
SDP	PV input scale decimal point position	0: No decimal place 1: One decimal place 2: Two decimal places
SH	Maximum value of PV input scale	-19999 to 30000, (SL<SH), SH - SL ≤ 30000
SL	Minimum value of PV input scale	-

Note 1: SDP, SH, and SL are displayed only for voltage/current input.

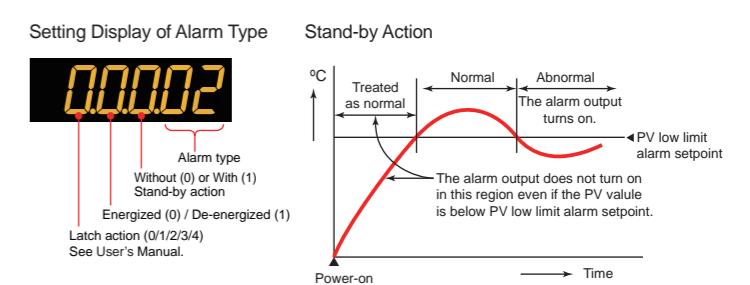

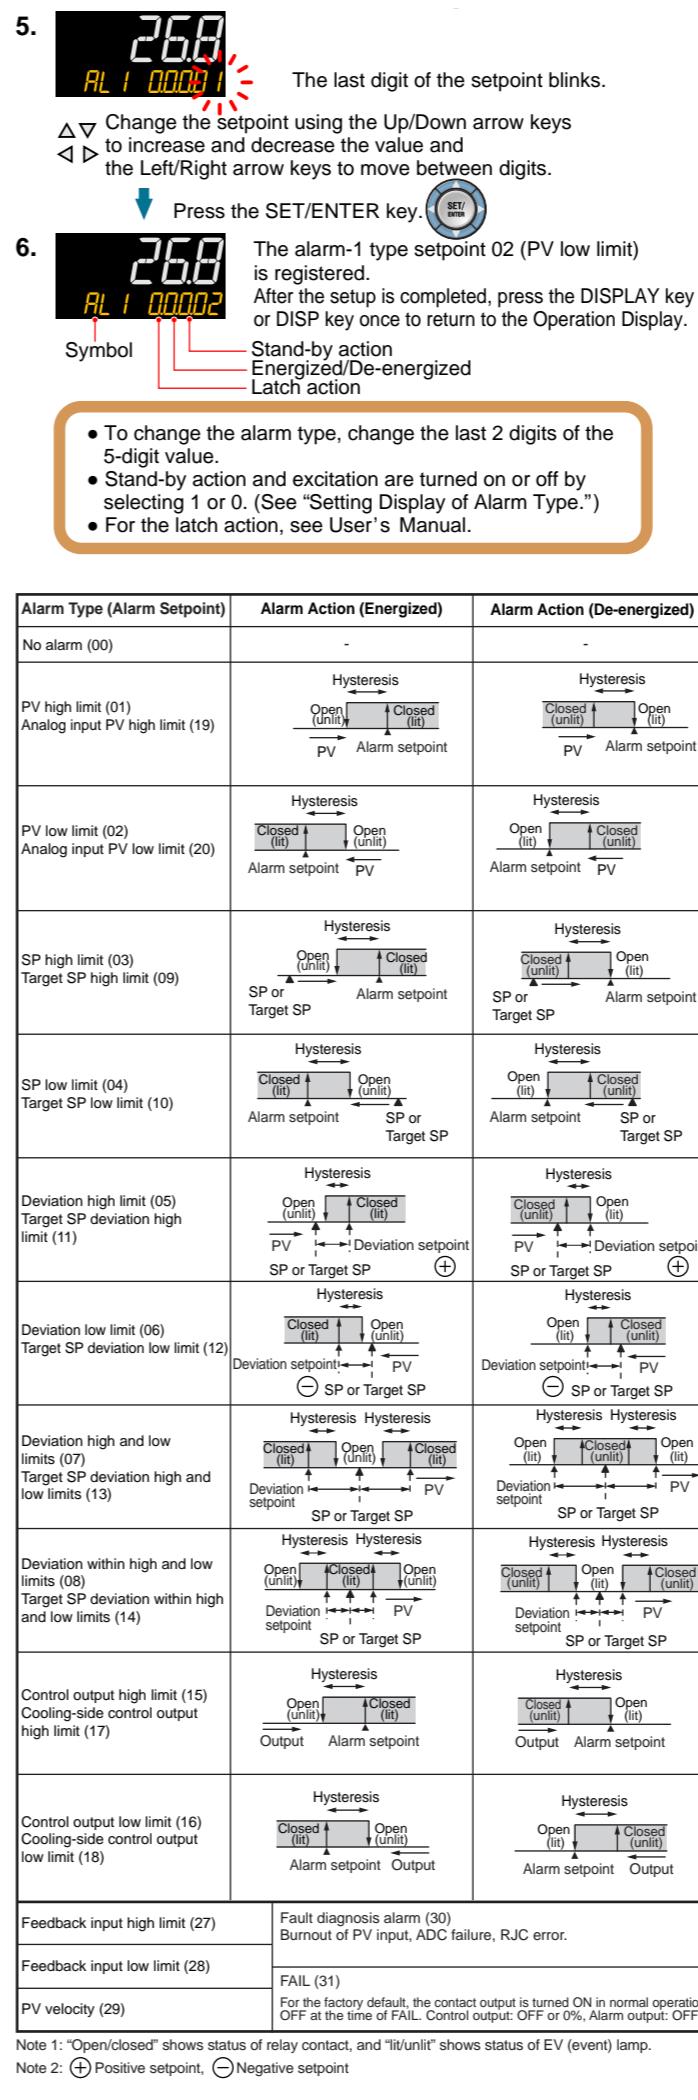

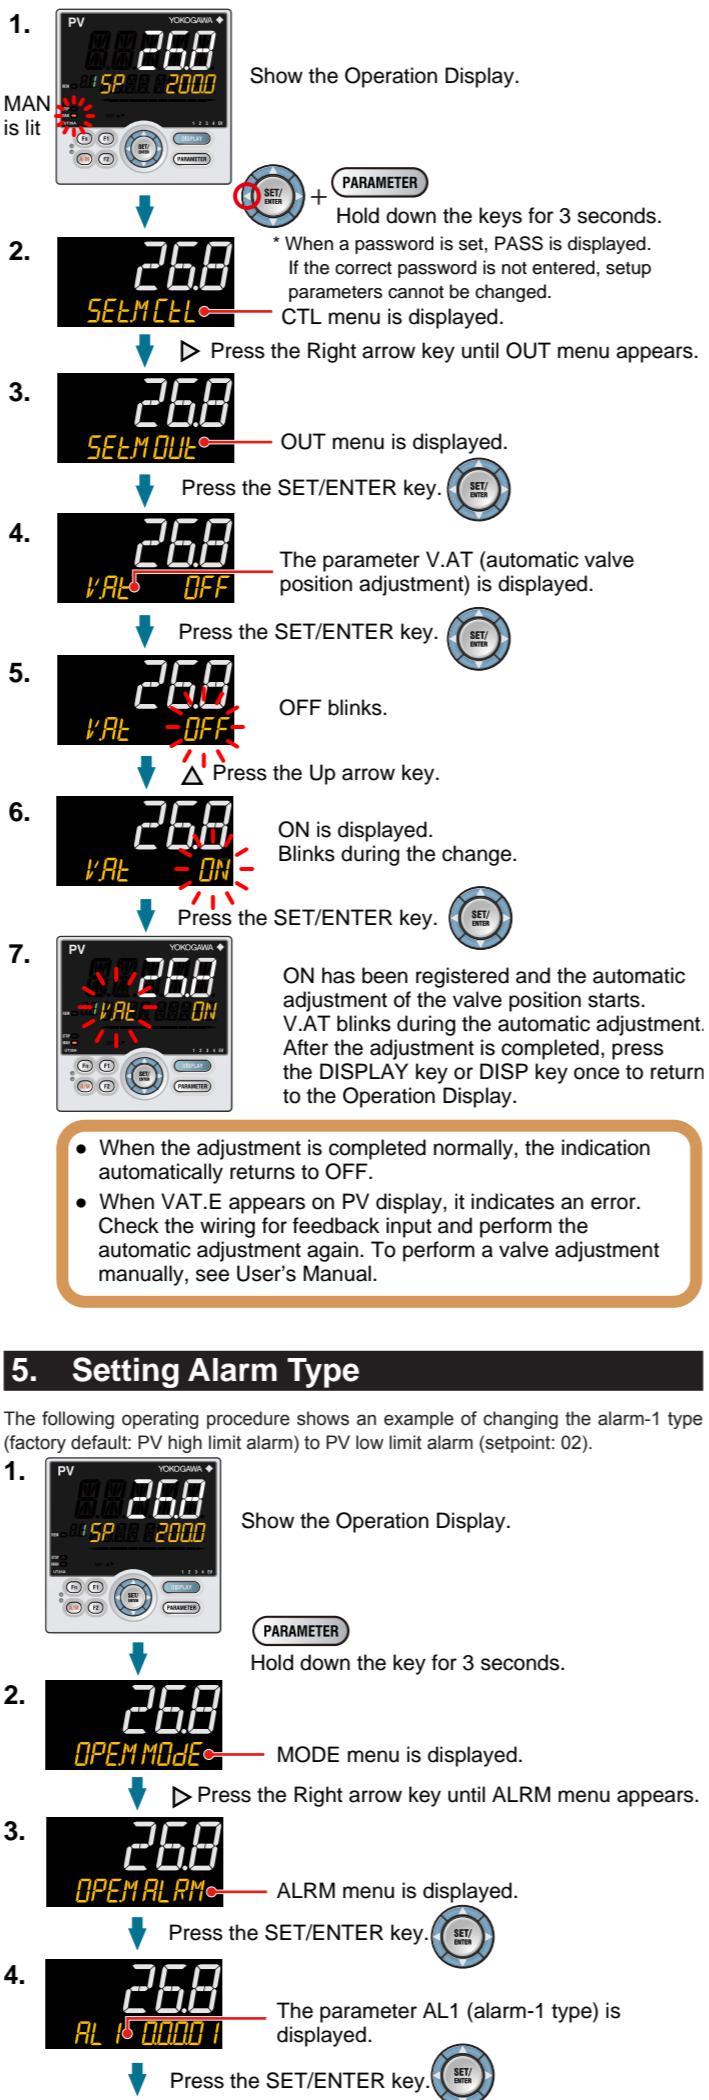

Note 2: W: W-5%Re/W-26%Re (Hoskins Mfg.Co.), ASTM E988

Output Function

Parameter Symbol	Name of Parameter	Setting Range
OT	Output type selection	Control output or Heating-side control output (Lower two digits) Cooling-side control output (Upper two digits) 00: OFF 01: OUT terminals (voltage pulse) 02: OUT terminals (current) 03: OUT terminals (relay) 04: OUT2 terminals (relay) 05: RET/OUT2 terminals (voltage pulse) 06: RET/OUT2 terminals (voltage pulse) 07: RET/OUT2 terminals (current)
CT	Control output cycle time	0.5 to 1000.0 s Heating-side control output cycle time (in Heating/cooling control)
CTc	Cooling-side control output cycle time (in Heating/cooling control)	-

4. Adjusting Valve Position Automatically (for a Position Proportional Type Controller Only)

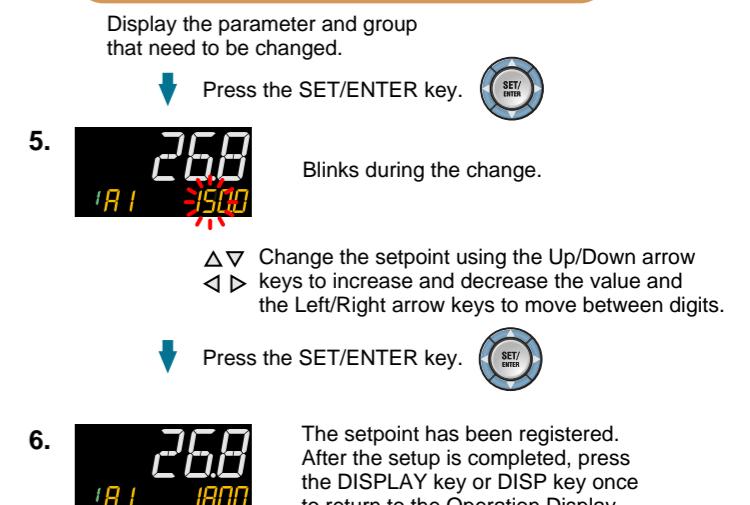

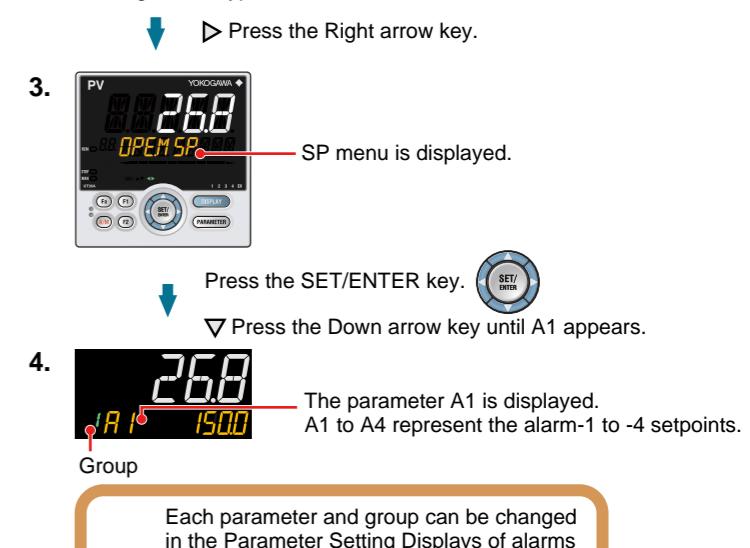

The following operating procedure describes how to input feedback signals from the control valve and adjust the fully-open and fully-closed positions of the control valve automatically. The fully-open and fully-closed positions of the valve can be adjusted automatically by inputting feedback signals from the valve. To adjust the valve position, you need to carry out the connection and bring the controller into manual mode. For the connection, see "6. Terminal Wiring Diagrams" in "Installation and Wiring", and for the manual mode, see "5. Switching between AUTO and MAN" in "Operations".

6. Setting Alarm Setpoint

The following operating procedure shows an example of setting the alarm-1 setpoint of group 1 to 180.0.
Before setting the alarm setpoint, check the alarm type.
To change the alarm type, see "5. Setting Alarm Type."

- Show the Operation Display.
- Display MODE menu with the same procedure as described in Setting Alarm Type.

Initializing parameter values

Parameters that you have changed can be initialized to factory default values or user default values. For details, see "Parameter Initialization" in the User's Manual.

Changing the parameter display levels

This operation guide does not explain all the parameters. To display all the parameters, you need to change the parameter display level to professional setting mode. For details, see "Setting Security Functions" in the User's Manual.

UTAdvanced.

Operations

YOKOGAWA ♦
Yokogawa Electric Corporation

This operation guide describes key entries for operating the UT35A/UT32A. Although the display of UT35A is used in this guide, UT32A can be operated similarly. For operations using external contact inputs, see "D1" of "6. Terminal Wiring Diagrams" in "Installation and Wiring." If you cannot remember how to carry out an operation during setting, press the DISPLAY key or DISP key once. This brings you to the display (Operation Display) that appears at power-on. The scrolling guide is displayed on PV display in the Parameter Setting Display. This guide can be turned on/off with the Fn key.

For details of the each function, refer to the electronic manual. User's manuals can be downloaded or viewed at the following URL.

<http://www.yokogawa.com/ns/ut/im/>

1. Monitoring-purpose Operation Displays Available during Operation

■ Operation Display Switching Diagram for Standard and Position Proportional Types

• SP Display

Displays the measured input value on PV display.

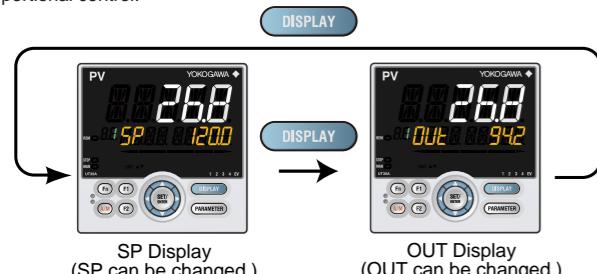

Displays the target setpoint (SP) on Setpoint display (SP can be changed).

• OUT Display

Displays the measured input value on PV display.

Displays the control output value (OUT) on Setpoint display (OUT can be changed in manual mode).

Displays the valve's feedback input value (at 0 to 100% valve opening) in Position proportional control.

■ Operation Display Switching Diagram for Heating/Cooling Type

• SP Display

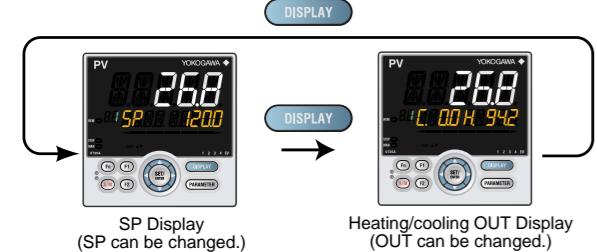

Displays the measured input value on PV display.

Displays the target setpoint (SP) on Setpoint display (SP can be changed).

• OUT Display

Displays the measured input value on PV display.

Displays the control output values (C.H.) of heating and cooling sides on Setpoint display (C.H. can be changed in manual mode).

After showing the OUT Display, press the DISPLAY key or DISP key to show the following displays conditionally. For details, see User's Manual.

Standard, Position Proportional, and Heating/Cooling Types

- SELECT Displays 1 to 5 (which appear when registered)
- Analog Input Display (display only) (factory default: non-display)
- Position Proportional Computation Output Display (display only) (factory default: non-display)
- PID Number Display (display only) (factory default: non-display)
- Heater Break Alarm-1 Current Display (display only) (for heater break alarm option only)
- Heater Break Alarm-2 Current Display (display only) (for heater break alarm option only)

2. Setting Target Setpoint (SP)

1. Show the SP Display (Operation Display). (This is an example of setting the target setpoint to 150.0).

2. Press the SET/ENTER key to start the last digit of the setpoint blinking. Blinking allows you to change the value.

3. □ To set the setpoint, use the △ Left/Right arrow keys to move between digits and the Up/Down arrow keys to increase and decrease the value.

4. When the required value is displayed, press the SET/ENTER key to register the setpoint.

3. Performing/Canceling Auto-tuning

Auto-tuning should be performed after setting a target setpoint.

Make sure that the controller is in automatic mode (AUTO) and in run mode (RUN) before auto-tuning. For setting to AUTO, see "5. Switching between AUTO and MAN," and for setting to RUN, see "6. Switching between RUN and STOP."

If the setpoint is known in advance or auto-tuning does not find any appropriate PID constants, set the PID manually. For setting the PID manually, see User's Manual.

Do not perform auto-tuning for the following processes.

Tune PID manually.

- Processes with fast response such as flow rate control and pressure control.
- Processes which do not allow the output to be turned on and off even temporarily.
- Processes which prohibit severe output changes at control valves (or other actuators).
- Processes in which product quality can be adversely affected if PV values fluctuate beyond their allowable ranges.

1. Show the Operation Display.

2. Hold down the PARAMETER key or PARA key for 3 seconds to display MODE menu.

In cases where the communication is specified, the parameter R.L (REMOTE/LOCAL switch) is displayed.

3. Press the SET/ENTER key.

4. The parameter SPNO. (SP number selection) is displayed.

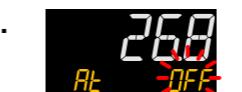

5. △ Press the Up/Down arrow keys to change the setpoint.

6. The setpoint has been registered. Press the DISPLAY key or DISP key once to return to the Operation Display.

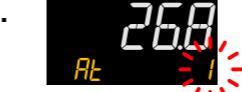

7. SPNO. has been changed to 2.

OFF blinks.

△ Press the Up/Down arrow keys to display the required setpoint.

Blinks during the change.

The setting range is 1 to 4 (represent group numbers) or R. To perform auto-tuning for the PID of group 1, set the parameter AT to 1. To quit the auto-tuning, set the parameter to OFF.

Press the SET/ENTER key.

The setpoint has been registered. This starts auto-tuning. The limiter can be set to the output during auto-tuning. For details, see User's Manual.

During auto-tuning.

- The MAN lamp blinks.
- The OUT symbol appears.
- The output values at 100% and 0% appear alternately.

The MAN lamp goes off, which means that the auto-tuning completed normally.

5. Switching between AUTO and MAN

AUTO and MAN switching can be performed using any of the following: (1) A/M key, (2) Contact input, (3) Communication, and (4) User function key. The figure below shows a direct operation using the A/M key. When AUTO and MAN switching function is assigned to the contact input, and the contact input is ON, the switching by key operation cannot be performed. For details, see User's Manual.

MAN lamp is lit in MAN mode.

Each time you press the A/M key, AUTO and MAN is switched alternately.

When AUTO is switched into MAN, the control output value in AUTO mode is held. The controller can be operated manually from the hold value.

If the manual preset output is set (MPON parameter ≠ OFF), the controller can be operated manually from the arbitrary output value (MPO1 to MPO5 parameters).

6. Switching between RUN and STOP

RUN and STOP switching can be performed using any of the following: (1) Contact input, (2) Parameter, (3) Communication, and (4) User function key. The following shows an example of switching using the contact input.

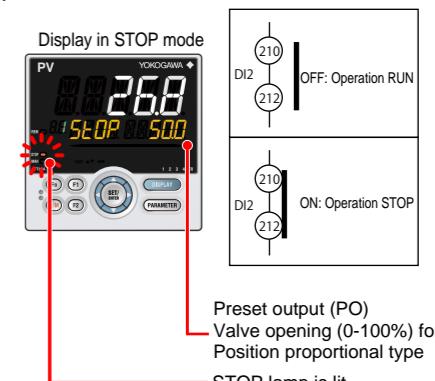

(The switching function is assigned to DI2 contact for the factory default.) For details of other switching methods and the display appearing when the operation is started, see User's Manual.

When the controller is stopped, input and outputs are as follows:

PV input	Displays the PV value.
Control output	Displays the preset output value. The preset output value is set for each PID group.
Alarm output	Turns the output on in case of an alarm.

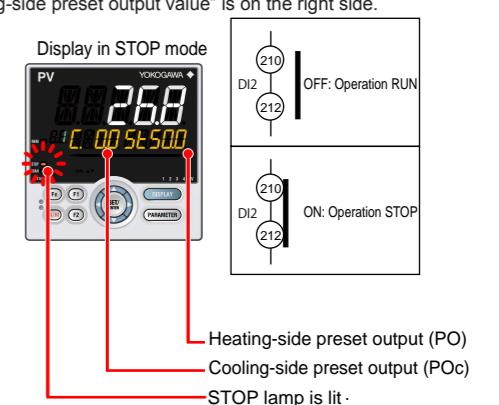

Display in STOP mode

"STOP" is displayed on Symbol display and "preset output value" is displayed on Data display.

Display in STOP mode in Heating/cooling control

"Cooling-side preset output value" is displayed on the left side of the "ST" symbol, and "Heating-side preset output value" is on the right side.

7. Switching between REM (Remote) and LCL (Local)

Remote and local switching can be performed using any of the following:
(1) Contact input, (2) Parameter, (3) Communication, and (4) User function key.

LCL (Local)

Control is performed using the target setpoint set on the controller.

REM (Remote)

Control is performed using a setpoint via communication for the target setpoint. The following shows an example of switching from local to remote using the parameter.
(Only in cases where the communication is specified.)

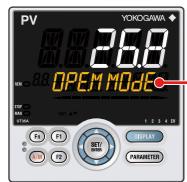

For details of other switching methods, see User's Manual.

• The PID group for the local SP number is used as PID in remote mode.

NOTE

When the contact input is ON, operation cannot be performed using the parameter, communication, or key. When the contact input is OFF and the setting is switched using the parameter, communication, or key, the last switching operation is performed.

1. Show the Operation Display.

PARAMETER
Hold down the PARAMETER key or PARA key for 3 seconds to display MODE menu.

3. Press the SET/ENTER key.

The parameter R.L (REMOTE/LOCAL switch) is displayed.

4. Press the SET/ENTER key.

△▽ Change the operation mode using the Up/Down arrow keys.
Blinks during the change.

5. Press the SET/ENTER key.

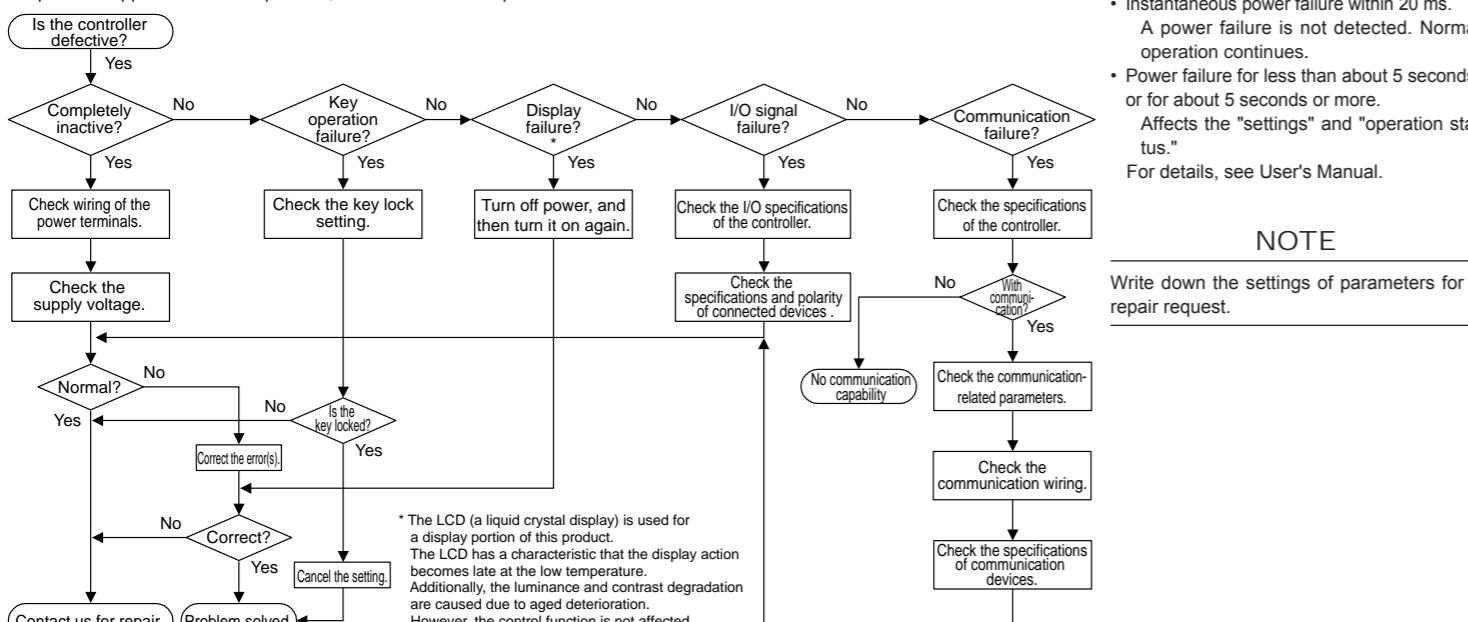

The REM lamp is lit.

9. Troubleshooting

Troubleshooting Flow

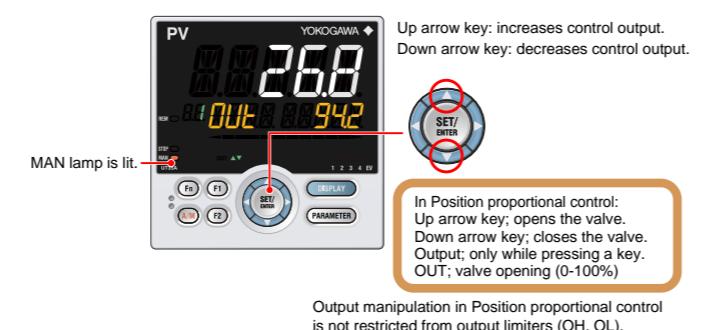

If the Operation Display does not appear after turning on the controller's power, check the procedures in the following flowchart.
If a problem appears to be complicated, contact our sales representatives.

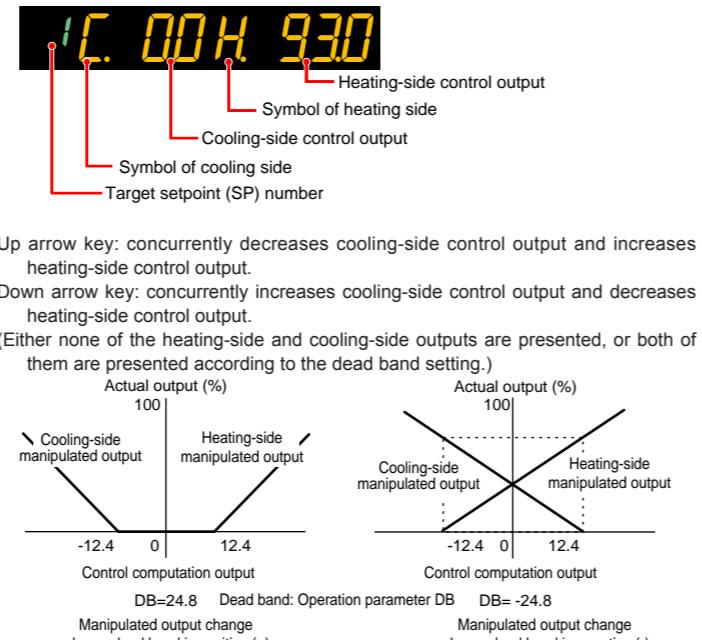

8. Manipulating Control Output in Manual Mode

NOTE

In manual mode, control output is manipulated by operating the keys (the value is changed using the Up/Down arrow keys, then outputted as it is).
Even if the SET/ENTER key is not pressed, the control output value changes according to the displayed value.
In stop mode (when the STOP lamp is lit), control output cannot be manipulated.

Manual operation in Heating/cooling control

■ Errors at Power On

The errors shown below may occur in the fault diagnosis when the power is turned on. (For details of Setpoint display and input/output action when each error occurs, see User's Manual.)

PV display (Operation Display)	Setpoint display (Operation Display)	Status indicator (Operation Display)	Parameter that displays error details	Error description	Cause and diagnosis	Remedy
Indication off	Indication off	—	—	Faulty MCU RAM / MCU ROM	MCU RAM / MCU ROM are failed.	Faulty. Contact us for repair.
ERR	SYS -----	—	—	System data error	System data is corrupted.	Faulty. Contact us for repair.
	PAR 0004 (for user default value error only)	—	User (parameter) default value error	User parameter is corrupted. Initialized to factory default value.		
	PAR 0010 (for setup parameter error only)	—	Setup parameter error	Setup parameter data is corrupted. Initialized to user default value.		
	PAR 0020 (for operation parameter error only)	—	Operation parameter error	Operation parameter data is corrupted. Initialized to user default value.		
	SLOT 0015 (0015: Error occurs to all hardware of E1 to E4-terminal areas.)	—	Setup parameter (OP.ER)	Nonresponding hardware of extended function (E1 to E4-terminal areas)	Inconsistency of system data and hardware of extended function. Nonresponding communication between hardware of extended function (E1 to E4-terminal areas).	Faulty. Contact us for repair.
	Normal indication	Rightmost decimal point on PV display blinks.	Setup parameter (PA.ER)	Calibration value error	Initialized to calibrated default value because of corrupted factory default value.	Faulty. Contact us for repair.
Normal indication	Normal indication	Rightmost decimal point on Symbol display blinks.	Setup parameter (PA.ER)	Faulty FRAM	Data writing (storing) to FRAM is impossible.	
Normal indication	Normal indication	LADDER lamp blinks	Setup parameter (LA.ER)	Corrupted ladder program	Ladder program is corrupted. Operates without ladder program.	Download the ladder program again.
Normal indication	0.000 0000 (Decimal point on the left of the Symbol display blinks)	—	Setup parameter (OP.ER)	User profile error	User profile is corrupted.	Download the user profile again.

■ Errors during Operation

The errors shown below may occur during operation. (For input/output action when each error occurs, see User's Manual.)

PV display (Operation Display)	Setpoint display (Operation Display)	Status indicator (Operation Display)	Parameter that displays error details	Error description	Cause and diagnosis	Remedy
AD.ERR	Normal indication (Note)	—	Setup parameter (AD1.E)	Analog input terminal ADC error •PV input	Analog input terminal AD value error	Faulty. Contact us for repair.
RJC.E (Displays RJC, E and PV alternately.)	Normal indication (Note)	—	Setup parameter (AD1.E)	Universal input terminal RJC error •PV input	Universal input terminal RJC error	Faulty. Contact us for repair. Set the parameter RJC to OFF to erase error indication.
B.OUT	Normal indication (Note)	—	Setup parameter (AD1.E)	Analog input terminal burnout error •PV input	Analog input terminal sensor burnout	Check wiring and sensor. Error indication is erased in normal operation.
			Setup parameter (PV1.E)	PV input burnout error	Burnout of analog input connected to PV	Check wiring and sensor of connected analog input terminals. Error indication is erased in normal operation.
OVER-OVER	Normal indication	—	Setup parameter (PV1.E)	PV input over-scale PV input under-scale (PV values out of -5 to 105%)	PV input is out of -5 to 105%. Also occurs when the data out of range which is the ladder calculation result is input.	Check analog input value or ladder program.
Normal indication	OUT -----	—	Setup parameter (AD2.E)	Feedback input resistor/current burnout	Feedback input burnout	Check wiring of feedback input resistor/current. Error indication is erased in normal operation.
	Normal indication	LADDER lamp blinks	Setup parameter (LA.ER)	Ladder calculation overflow	Floating point computation for ladder calculation is infinite.	Check the ladder program.
				Load factor over 100%	Computation does not end within the control period (load factor is 100% or more).	Change the control period or reduce the number of steps for the ladder program.
				Load factor over 200% (Forced end)	Computation does not end within the control period (load factor is 200% or more).	Change the control period or reduce the number of steps for the ladder program.
	0.000 00000 (Decimal point on the left of the Symbol display blinks)	—	Setup parameter (OP.ER)	Ladder program error	Ladder program is corrupted.	Download the ladder program again. If the error indication is still not erased, there is a fault. Contact us for repair.
AT.E	Normal indication	—	Setup parameter (PV1.E)	Auto-tuning time-out	Auto-tuning does not end even when 24 hours have elapsed after the start of tuning.	Check the process. Hold down any key to erase the error indication.
VAT.E	Normal indication	—	Setup parameter (AD2.E)	Valve position automatic adjustment error	Fully-closed valve position is equal to or larger than the fully-open valve position after automatic valve position adjustment is performed.	Check wiring and valve. Hold down any key to erase the error indication.
Normal indication	0.000 00000 (Decimal point on the left of the Symbol display blinks)	—	Setup parameter (OP.ER)	Framing parity error Buffer overflow Inter-character time-out Checksum error (PC link communication with checksum) CRC check error (Modbus/RTU) LRC check error (Modbus/ASCII)	Communication error (RS-485 communication)	Check the communication parameters. Recovery at normal receipt. Hold down any key to stop blinking.
	0.000 00000 (Decimal point on the left of the Symbol display blinks)	—	Setup parameter (OP.ER)	Inconsistency of loop between coordinated master and slaves	Check the communication parameters. Recovery at normal receipt. Change from remote to local mode to stop blinking.	
Normal indication	0.000 00000 (Decimal point on the left of the Symbol display blinks)	—	Setup parameter (OP.ER)	Communication from coordinated master is interrupted for 2 seconds.	When the mode is changed from remote to local, SP tracking does not work even if it is set to ON.	
Normal indication	0.000 00000 (Decimal point on the left of the Symbol display blinks)	—	Setup parameter (OP.ER)	User profile error	User profile is corrupted.	Download the user profile again.
Normal indication	Normal indication	Rightmost decimal point on Symbol display blinks.	Setup parameter (PA.ER)	Faulty FRAM	Writing (storing) data to FRAM is impossible.	Faulty. Contact us for repair.
Undefined	Undefined	—	—	Faulty MCU / DCU (ROM / RAM error, corrupted)	MCU / DCU is corrupted.	Faulty. Contact us for repair.

Note: When an error occurs in input shown in Analog input display (Operation display), Setpoint display shows the same symbol as the PV display.

Operation Guide

UT35A/UT32A
Digital Indicating Controllers
Operation Guide

UTAdvanced

Parameters

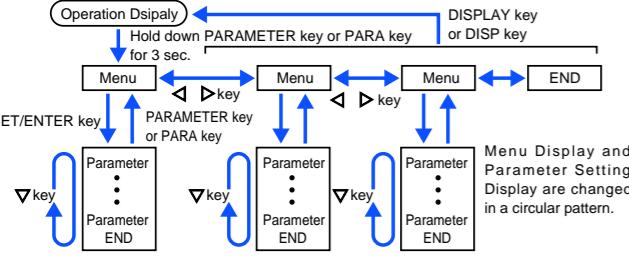

YOKOGAWA
Yokogawa Electric Corporation

This operation guide describes the functions of parameters briefly. The parameter symbols listed are in the order shown on the display in each group of menu symbols. In addition, each parameter table has a "User Setting" column, where you can record your setpoints when setting them in the controller. The scrolling guide is displayed on PV display in the Parameter Setting Display. This guide can be turned on/off with the Fn key. For details of the each function, refer to the electronic manual. User's manuals can be downloaded or viewed at the following URL.

<http://www.yokogawa.com/ns/ut/im/>

Operation Parameters

Hold down the PARAMETER key or PARA key for 3 seconds to move from the Operation Display to the Operation Parameter Setting Display. Press the DISPLAY key or DISP key once to return to the Operation Display.

The parameter groups can be switched using Δ , ∇ keys.

Move to the Setup Parameter Setting Display:
Hold down the PARAMETER key or PARA key and the Left arrow key simultaneously for 3 sec.

Operation for Setting

- To select the parameter setting displayed as the initial value, press the Down arrow key to move to the next parameter.
- To change and set the parameter setting, press the SET/ENTER key to start the setpoint blinking. The blinking state allows you to make changes (setting mode). Use the Up/Down/Left/Right arrow keys to change the setpoint. Press the SET/ENTER key to register the setting.

Note that there are some parameters which are not displayed depending on the model and suffix codes, control type (CNT), etc. The parameters for professional setting mode (LEVL: PRO) are not described in this manual. See User's Manual.

■ Operation Mode

Menu symbol: **M0DE** (MODE)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
SR (S.R.)	STOP/RUN switch	STOP: Stop mode RUN: Run mode Preset output (PO) is generated in STOP mode. Default: Not displayed. STOP/RUN switch is assigned to contact input.	RUN		
RL (R.L.)	REMOTE/LOCAL switch	LCL: Local mode REM: Remote mode (Displayed only in cases where the communication is specified.)	LCL		
AT	AUTO-tuning switch	OFF: Disable 1 to 4: Perform auto-tuning. Tuning result is stored in the specified numbered PID. R: Tuning result is stored in the PID for reference deviation.	OFF		
SPNO (SPNO.)	SP number selection	1 to 4 (Depends on the setup parameter SPGR. setting.)	1		
PID	PID number	The PID group number being selected is displayed. 1 to 4, R: PID group for reference deviation	1		

■ SELECT Parameter

Menu symbol: **E5** (CS)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
Registered parameter symbol	SELECT parameter 10 to 19	Setting range of a registered parameter. For details, see User's Manual.	—	Table below	EASY
Parameter	n=10 n=11 n=12 n=13 n=14 n=15 n=16 n=17 n=18 n=19				
CSn					

For the registration of SELECT parameters, see User's Manual.

■ SP and Alarm Setpoint Setting Parameter

Menu symbol: **SP** (SP)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
SP (SP)	Target setpoint	0.0 to 100.0% of PV input range (EU) (Setting range: SPL to SPH)	SPL		
SUB (SUB)	Sub-target setpoint (in Two-position two-level control)	Set the offset from SP. -100.0 to 100.0% of PV input range span (EUS)	0.0 % of PV input range span		
PIDN	PID number selection	Set a PID group number to use. 1 to 4 (Depends on the setup parameter PIDG. setting.)	1 to 4	Table below	EASY
AL1 to AL4 (A1 to A4)	Alarm-1 to -4 setpoint	Set a display value of setpoint of PV alarm, SP alarm, deviation alarm, output alarm, or velocity alarm. -19999 to 30000 (Set a value within the input range.) Decimal point position depends on the input type	0		

For the parameter SP (target setpoint), 4 groups are displayed for the factory default. The number of groups can be changed by the setup parameter SPGR. (number of SP groups). For the alarm setpoint parameter, alarm-1 to -4 are displayed for the factory default. The number of alarms can be changed using the setup parameter ALNO. (number of alarms). To change the number of SP groups or alarms, see User's Manual.

Use the following table to record SP and alarm setpoints.

Parameter	n=1	n=2	n=3	n=4
SP				
SUB				
PIDN				
A1				
A2				
A3				
A4				

n: group number

■ SP-related Setting Parameter

Menu symbol: **SPS** (SPS)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
RL (RT)	Remote input ratio	SP = Remote input x RT + Remote input bias 0.001 to 9.999	1.000		
RBS (RBS)	Remote input bias	-100.0 to 100.0% of PV input range span (EUS)	0.0 % of PV input range span		STD
UPR (UPR)	SP ramp-up rate	Used to prevent SP from changing suddenly. Set a ramp-up rate or ramp-down rate per hour or minute. Set a time unit using the parameter TMU. OFF, 0.0 + 1 digit to 100.0% of PV input range span (EUS)	OFF		
DNR (DNR)	SP ramp-down rate	OFF, 0.0 + 1 digit to 100.0% of PV input range span (EUS)	OFF		EASY
TMU (TMU)	SP ramp-rate time unit	HOUR: Ramp-up rate or ramp-down rate per hour MIN: Ramp-up rate or ramp-down rate per minute	HOUR		
SPT (SPT)	SP tracking selection	Tracking is performed when the mode changes from Remote to Local. (The local setpoint keeps track of the remote setpoint.) OFF, ON	ON		
PVT (PVT)	PV tracking selection	Causes the setpoint to keep track of the PV so the setpoint automatically reverts to its original value at a preset rate of change. The UPR, DNR, and TMU are used in combination. Operating conditions: 1) MAN → AUTO, 2) STOP → AUTO, 3) Power-on, 4) SP number change, 5) SP change OFF, ON	OFF		STD

For the alarm function setting parameter, 4 alarms are displayed for the factory default. The number of alarms can be changed by the setup parameter ALNO. (number of alarms). To change the number of alarms, see User's Manual.

n: alarm number

■ Alarm Function Setting Parameter

Menu symbol: **ALRM** (ALRM)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
		Set a 5-digit value in the following order. [Latch action (0/1/2/3/4)] + [Energized (0) or De-energized (1)] + [Without (0) or With (1) Stand-by action] + [Alarm type: 2 digits (see below)] For latch action, see User's Manual.			
AL1 to AL4 (AL1 to AL4)	Alarm-1 to 4 type Example: AL1 00001	Alarm type: 00: Disable 01: PV high limit 02: PV low limit 03: SP high limit 04: SP low limit 05: Deviation high limit 06: Deviation low limit 07: Deviation high and low limits 08: Deviation within high and low limits 09: Target SP high limit 10: Target SP low limit 11: Target SP deviation high limit 12: Target SP deviation low limit 13: Target SP deviation high and low limits 14: Target SP deviation within high and low limits 15: OUT high limit 16: OUT low limit 17: Cooling-side OUT high limit 18: Cooling-side OUT low limit 19: Analog input PV high limit 20: Analog input PV low limit 27: Feedback input high limit 28: Feedback input low limit 29: PV velocity 30: Fault diagnosis 31: FAIL	AL1, AL3: Latch action (0) PV high limit (01) Without Stand-by action (0) Energized (0) AL2, AL4: Latch action (0) Energized (0) Without Stand-by action (0) PV low limit (02)	Table below	EASY
VE1 to VE4 (VT1 to VT4)	PV velocity alarm time setpoint 1 to 4	0.01 to 99.59 (minute.second)	1.00		
HY1 to HY4 (HY1 to HY4)	Alarm-1 to 4 hysteresis	Set a display value of setpoint of hysteresis. -19999 to 30000 (Set a value within the input range.) Decimal point position depends on the input type. When the decimal point position for the input type is set to "1", the initial value of the hysteresis is "1.0".	10		
DYN1 to DYN4 (DYN1 to DYN4)	Alarm-1 to -4 On-delay timer	An alarm output is ON when the delay timer expires after the alarm setpoint is reached. 0.00 to 99.59 (minute.second)	0.00		STD
AMD (AMD)	Alarm mode	0: Always active 1: Not active in STOP mode 2: Not active in STOP or MAN mode	0		

For the alarm function setting parameter, 4 alarms are displayed for the factory default. The number of alarms can be changed by the setup parameter ALNO. (number of alarms). To change the number of alarms, see User's Manual.

Parameter	n=1	n=2	n=3	n=4
ALn				
VTn				
HYn				
DYNn				

n: alarm number

■ PV-related Setting Parameter

Menu symbol: **PVS** (PVS)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
b5 (BS)	PV input bias	-100.0 to 100.0% of PV input range span (EUS)	0.0 % of PV input range span		EASY
FL (FL)	PV input filter	OFF, 1 to 120 s	OFF		

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
P (P)	Proportional band Heating-side proportional band (in Heating/cooling control)	0.0 to 99.9% When 0.0% is set, it operates as 0.1%.	5.0%		
I (I)	Integral time Heating-side integral time (in Heating/cooling control)	OFF: Disable 1 to 6000 s	240 s		
d (D)	Derivative time Heating-side derivative time (in Heating/cooling control)	OFF: Disable 1 to 6000 s	60 s	</	

If you are using two or more groups of PID parameters, use the following table to record their setting values.

Parameter	n=2	n=3	n=4	R
P				
I				
D				
OH				
OL				
MR				
HYS				
SU.HY				
HYUP				
HYLO				
DR				
SU.DR				
Pc				
Ic				
Dc				
OHC				
OLC				
HYSC

PO				
SU.PO				
PoC				

n: group number

■ Tuning Parameter

Menu symbol: **EUNE** (TUNE)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level	
SC (SC)	Super function	OFF: Disable 1: Overshoot suppressing function (normal mode) 2: Hunting suppressing function (stable mode) Enables to answer the wider characteristic changes compared with response mode. 3: Hunting suppressing function (response mode) Enables quick follow-up and short converging time of PV for the changed SP. 4: Overshoot suppressing function (strong suppressing mode) Note: Setpoints 2 and 3 must be used in PID control or PI control. Disabled in the following controls: 1) ON/OFF control, 2) PD control, 3) P control, 4) Heating/cooling control. Do not use the function for the control processes with response such as flow or pressure control.	OFF			EASY
AT.TY (AT.TY)	Auto-tuning type	0: Normal 1: Stability	0		STD	
AR (AR)	Anti-reset windup (excess integration prevention)	AUTO, 50.0 to 200.0%	AUTO			
OPR (OPR)	Output velocity limiter	OFF: Disable 0.1 to 100.0%/s	OFF			
MPO (MPON)	Manual preset output number selection	Select the output used in MAN mode when switched from AUTO to MAN mode. OFF: Hold the control output in AUTO mode (bumpless) 1: Use manual preset output 1 (output bump) 2: Use manual preset output 2 (output bump) 3: Use manual preset output 3 (output bump) 4: Use manual preset output 4 (output bump) 5: Use manual preset output 5 (output bump)	OFF			
MPO1 to MPO5 (MPO1 to MPO5)	Manual preset output 1 to 5	-5.0 to 105.0% However, output is limited to the output high limit and low limit.	0.0%	Table below		

Use the following table to record the manual preset output setting value.

Parameter	n=1	n=2	n=3	n=4	n=5
MPOn					

■ Zone Control Parameter

Menu symbol: **ZONE** (ZONE)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
RP1 to RP3 (RP1 to RP3)	Reference point 1 to 3	Set reference points at which switching is carried out between groups of PID constants according to the given temperature zone. 0.0 to 100.0% of PV input range (EU) (RP1 ≤ RP2 ≤ RP3)	100.0% of PV input range	Table below	STD
RHY (RHY)	Zone PID switching hysteresis	Hysteresis can be set for switching at a reference point. 0.0 to 10.0% of PV input range span (EUS)	0.5 % of PV input range span		
Rdv (RDV)	Reference deviation	Set a deviation from SP. The PID for reference deviation is used if there is a larger deviation than the preset reference deviation. OFF: Disable 0.0 + 1 digit to 100.0% of PV input range span (EUS)	OFF		

For Zone control, set the setup parameter ZON (zone PID selection) to Zone PID selection.

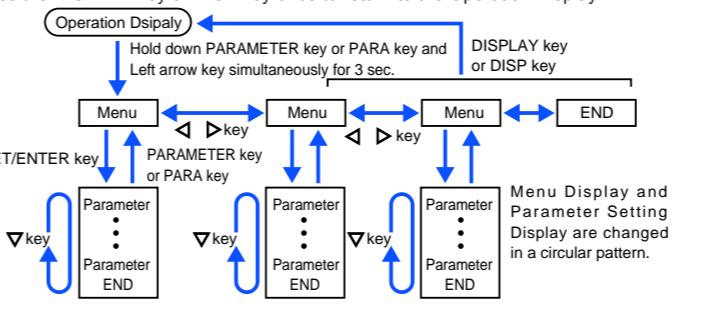

Use the following table to record the reference point setting value.

Parameter	n=1	n=2	n=3
RPN			

Setup Parameters

Hold down the PARAMETER key or PARA key and Left arrow key simultaneously for 3 seconds to move from the Operation Display or Operation Parameter Setting Display to the Setup Parameter Setting Display.

Press the DISPLAY key or DISP key once to return to the Operation Display.

Move to the Operation Parameter Setting Display:
Hold down the PARAMETER key or PARA key for 3 sec.

Operation for Setting

- To select the parameter setting displayed as the initial value, press the Down arrow key to move to the next parameter.
- To change and set the parameter setting, press the SET/ENTER key to start the set-point blinking. The blinking state allows you to make changes (setting mode). Use the Up/Down/Left/Right arrow keys to change the setpoint. Press the SET/ENTER key to register the setting.

Note that there are some parameters which are not displayed depending on the Model and Suffix codes, control type (CNT), etc. The parameters for professional setting mode (LEV1: PRO) are not described in this manual. See User's Manual.

■ Control Function Setting Parameter

Menu symbol: **CFEL** (CTL)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
CNE (CNT)	Control type	PID: PID control ONOF: ON/OFF control (1 point of hysteresis) ONOF2: ON/OFF control (2 points of hysteresis) 2P2L: Two-position two-level control H/C: Heating/cooling control	PID or H/C (for Heating/cooling type)		EASY
SPGR (SPGR.)	Number of SP groups	Set a number of SP groups to use. 1 to 4	4		STD
ZON (ZON)	Zone PID selection	If set to "SP group number selection," allows PID constants to be selected for each SP group. If set to "Zone PID selection," automatically selects PID constants according to the range set in the Reference point. 0: SP group number selection 1 1: Zone PID selection (selection by PV) 2: Zone PID selection (selection by target SP) 3: SP group number selection 2 4: Zone PID selection (selection by SP)	0		
PIDG (PIDG.)	Number of PID groups	Set a number of PID groups to use. 1 to 4	4		

■ PV Input Setting Parameter

Menu symbol: **PIV** (PIV)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level	
PUNI (P.UNI)	Control PV input unit	OFF: Disable K1: -270.0 to 1370.0 °C / -450.0 to 2500.0 °F K2: -270.0 to 1000.0 °C / -450.0 to 2300.0 °F K3: -200.0 to 500.0 °C / -200.0 to 1000.0 °F J: -200.0 to 1200.0 °C / -300.0 to 2500.0 °F T1: -270.0 to 400.0 °C / -450.0 to 750.0 °F T2: 0.0 to 400.0 °C / -200.0 to 750.0 °F B: 0.0 to 1800.0 °C / 32 to 3300.0 °F S: 0.0 to 1700.0 °C / 32 to 3100.0 °F R: 0.0 to 1700.0 °C / 32 to 3100.0 °F N: -200.0 to 1300.0 °C / 300.0 to 2400.0 °F E: -270.0 to 1000.0 °C / -450.0 to 1800.0 °F L: -200.0 to 900.0 °C / -300.0 to 1600.0 °F U1: -200.0 to 400.0 °C / -200.0 to 750.0 °F U2: 0.0 to 400.0 °C / -200.0 to 1000.0 °F W: 0.0 to 2300.0 °C / 32 to 4200.0 °F PL2: 0.0 to 1390.0 °C / 32 to 2500.0 °F P2040: 0.0 to 1900.0 °C / 32 to 3400.0 °F WRE: 0.0 to 2000.0 °C / 32 to 3600.0 °F JPT1: -200.0 to 500.0 °C / -300.0 to 1000.0 °F JPT2: -150.0 to 150.0 °C / -200.0 to 300.0 °F PT1: -200.0 to 850.0 °C / -300.0 to 1560.0 °F PT2: -200.0 to 500.0 °C / -300.0 to 1000.0 °F PT3: -150.0 to 150.0 °C / -200.0 to 300.0 °F 0.4-2V: 0.400 to 2.000 V 1-5V: 1.000 to 5.000 V 4-20: 4.00 to 20.0 mA 0-2V: 0.000 to 2.000 V 0-10V: 0.000 to 10.00 V 0-20: 0.00 to 20.00 mA -1020: -10.00 to 20.00 mV 0-100: 0.0 to 100.0 mV				OFF
UNI E (UNIT)	PV input unit	- No unit: C: Degree Celsius - No unit, --: No unit, ---: No unit, F: Degree Fahrenheit			C	
RH (RH)	Maximum value of PV input range	Depends on the input type. - For temperature input - Set the temperature range that is actually controlled. (RL < RH) - For voltage / current input - Set the range of a voltage / current signal that is applied. The scale across which the voltage/ current signal is actually controlled should be set using the maximum value of input scale (SH) and minimum value of input scale (SL). (Input is always 0% when RL = RH.)			Depends on the input type	
RL (RL)	Minimum value of PV input range	Depends on the input type			Depends on the input type	
SdP (SDP)	PV input scale decimal point position	0: No decimal place 1: One decimal place 2: Two decimal places 3: Three decimal places 4: Four decimal places			Depends on the input type	
SH (SH)	Maximum value of PV input scale	-19999 to 30000, (SL < SH), SH - SL ≤ 30000			Depends on the input type	
SL (SL)	Minimum value of PV input scale	SH - SL ≤ 30000			Depends on the input type	
B5L (BSL)	PV input burnout action	OFF: Disable UP: Upscale DOWN: Downscale			Depends on the input type	
AB5 (AB5)	PV analog input bias	-100.0 to 100.0% of each input range span (EUS)			0.0% of PV input range span	
RF1 (A.FL)	PV analog input filter	OFF, 1 to 120 s			OFF	

W: W-5% Re/W-26% Re(Hoskins Mfg.Co.). ASTM E988, WRE: W97Re3-W75Re25

■ Input Range, SP Limiter Setting Parameter

Menu symbol: **MPV** (MPV)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
PUNI (P.UNI)	Control PV input unit	- No unit C: Degree Celsius - No unit ---: No unit --: No unit F: Degree Fahrenheit	Same as PV input unit		
PDP (P.DP)	Control PV input decimal point position	0: No decimal place 1: One decimal place 2: Two decimal places 3: Three decimal places 4: Four decimal places	Depends on the input type		
PRH (P.RH)	Maximum value of control PV input range	-19999 to 30000, (P.RL < P.RH), P.RH - P.RL ≤ 30000	Depends on the input type		
PRL (P.RL)	Minimum value of control PV input range	Depends on the input type			
SPH <br					

■ Output Setting Parameter

Menu symbol: **OUT** (OUT)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level	
OUT (OT)	Output type selection OUT 0001 Upper two digits Lower two digits	Control output or Heating-side control output (Lower two digits) 00: OFF 01: OUT terminals (voltage pulse) 02: OUT terminals (current) 03: OUT terminals (relay) 06: OUT2 terminals (relay) 07: RET/OUT2 terminals (voltage pulse) 08: RET/OUT2 terminals (current) 09: Cooling-side control output (Upper two digits) 00: OFF 01: OUT terminals (voltage pulse) 02: OUT terminals (current) 03: OUT terminals (relay) 06: OUT2 terminals (relay) 07: RET/OUT2 terminals (voltage pulse) 08: RET/OUT2 terminals (current)	Standard type: 00.03 Heating/cooling type: 06.03	EASY		
		0: Heater current measurement 1: Heater break alarm (Heating-side) 2: Cooling-side heater break alarm	1			
	Hb15 (HB1.S)	Heater break alarm-1 function selection	1			
	Hb25 (HB2.S)	Heater break alarm-2 function selection	1			
	Hb1 (HB1)	Heater break alarm-1 current setpoint	OFF	EASY		
	Hb2 (HB2)	Heater break alarm-2 current setpoint	OFF			
	CT1 (CT1.T)	CT1 coil winding number ratio	800	1 to 3300		
	CT2 (CT2.T)	CT2 coil winding number ratio	800			
	HdN1 (HDN1)	Heater break alarm-1 On-delay timer	0.00	STD		
	HdN2 (HDN2)	Heater break alarm-2 On-delay timer	0.00			
CT (CT)	Control output cycle time Heating-side control output cycle time (in Heating/cooling control)	30.0 s	EASY			
CTC (CTC)	Cooling-side control output cycle time	0.5 to 1000.0 s				
VRE (V.RT)	Automatic valve position adjustment	OFF: Stop automatic adjustment ON: Start automatic adjustment	OFF	EASY		
VRS (V.RS)	Valve position setting reset	Setting V.RS to ON resets the valve adjustment settings and causes the indication "V.RS" to blink.	OFF			
VL (V.L.)	Fully-closed valve position setting	Pressing the SET/ENTER key with valve position set to the fully-closed position by Down arrow key causes the adjusted value to be stored. When VL adjustment is complete, VL stops blinking.	-			
VH (V.H.)	Fully-opened valve position setting	Pressing the SET/ENTER key with valve position set to the fully-opened position by Up arrow key causes the adjusted value to be stored. When VH adjustment is complete, VH stops blinking	-			
TRT (TR.T)	Valve traveling time	5 to 300 s	60 s			
VMD (V.MOD)	Valve adjusting mode	0: Valve position feedback type 1: Valve position feedback type (moves to the estimating type if a feedback input error or break occurs.) 2: Valve position estimating type	0			
RTS (RTS)	Retransmission output type of RET	OFF: Disable PV1: PV SP1: SP OUT1: OUT (Valve opening: 0 to 100 % in Position proportional control) LPS: 15 V DC loop power supply TSP1: Target SP HOUT1: Heating-side OUT COUT1: Cooling-side OUT MV1: Position proportional output (internal computed value) PV: PV terminals analog input	PV1	EASY		
RTH (RTH)	Maximum value of retransmission output scale of RET	When RTS = PV1, SP1, TSP1, PV RTH + 1 digit to 30000 -19999 to RTH - 1 digit Decimal point position: When RTS=PV1, SP1, or TSP1, decimal point position is same as that of PV input. When RTS=PV, decimal point position is same as that of PV input scale.	100 % of PV input range	STD		
REL (RTL)	Minimum value of retransmission output scale of RET	0 % of PV input range				
OIRS (O1RS)	Retransmission output type of OUT current output	Same as RTS	OFF			
OIRH (O1RH)	Maximum value of retransmission output scale of OUT current output	When O1RS = PV1, SP1, TSP1, PV, O1RL + 1 digit to 30000 -19999 to O1RH - 1 digit Decimal point position: When O1RS=PV1, SP1, or TSP1, decimal point position is same as that of PV input. When O1RS=PV, decimal point position is same as that of PV input scale.	-			
OIRL (O1RL)	Minimum value of retransmission output scale of OUT current output	-				
OUR (OU.A)	OUT current output range	4-20: 4 to 20 mA 0-20: 0 to 20 mA 20-4: 20 to 4 mA 20-0: 20 to 0 mA	4-20			
RETA (RETA)	RET current output range	4-20				

■ Heater Break Alarm Setting Parameter

Menu symbol: **HbR** (HBA)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
Hb15 (HB1.S)	Heater break alarm-1 function selection	0: Heater current measurement 1: Heater break alarm (Heating-side) 2: Cooling-side heater break alarm	1		EASY
Hb25 (HB2.S)	Heater break alarm-2 function selection	1			
Hb1 (HB1)	Heater break alarm-1 current setpoint	OFF	EASY		
Hb2 (HB2)	Heater break alarm-2 current setpoint	OFF			
CT1 (CT1.T)	CT1 coil winding number ratio	800	1 to 3300		
CT2 (CT2.T)	CT2 coil winding number ratio	800			
HdN1 (HDN1)	Heater break alarm-1 On-delay timer	0.00	STD		
HdN2 (HDN2)	Heater break alarm-2 On-delay timer	0.00			

■ Ethernet Communication Setting Parameter (E3-terminal Area)

Menu symbol: **EETHR** (ETHR)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
HSP (HSP)	High-speed response mode	OFF, 1 to 8	1		EASY
bPS (BPS)	Baud rate	9600: 9600 bps 19200: 19.2k bps 38400: 38.4k bps	38400		
PRI (PRI)	Parity	NONE: None EVEN: Even ODD: Odd	EVEN		
IP1 to IP4 (IP1 to IP4)	IP address 1 to 4	0 to 255 Initial value: (IP1),(IP2),(IP3),(IP4) = (192),(168),(1),(1)	See left	Table below	
SM1 to SM4 (SM1 to SM4)	Subnet mask 1 to 4	0 to 255 Initial value: (SM1),(SM2),(SM3),(SM4) = (255),(255),(255),(0)	See left	Table below	
dG1 to dG4 (DG1 to DG4)	Default gateway 1 to 4	0 to 255 Initial value: (DG1),(DG2),(DG3),(DG4) = (0),(0),(0),(0)	See left	Table below	
PRT (PRT)	Port number	502, 1024 to 65535	502		
I PAR (IPAR)	IP access restriction	OFF: Disable, ON: Enable	OFF		
IP1 to IP4 (IP1 to IP4)	Permitted IP address 1-1 to 1-4 Permitted IP address 2-1 to 2-4	0 to 255 Initial value: (1,IP1),(1,IP2),(1,IP3),(1,IP4) = (255),(255),(255),(255) (2,IP1),(2,IP2),(2,IP3),(2,IP4) = (255),(255),(255),(255)	See left	Table below	
ESW (ESW)	Ethernet setting switch	Setting this parameter to "ON" enables the Ethernet communication parameter settings. OFF, ON	OFF		

Use the following table to record Ethernet communication setting value.

Parameter	n=1	n=2	n=3	n=4
IPn				
SMn				
DGn				
1,IPn				
2,IPn				

■ RS-485 Communication Setting Parameter (UT35A: E3-terminal Area, UT32A: E1-terminal Area)

Menu symbol: **R485** (R485)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
PSL (PSL)	Protocol selection	PCL: PC link communication PLCSM: PC link communication (with checksum) LADR: Ladder communication CO-M: Coordinated master station CO-S: Coordinated slave station MBASC: Modbus (ASCII) MBRTU: Modbus (RTU) CO-S1: Coordinated slave station (Loop-1 mode) CO-S2: Coordinated slave station (Loop-2 mode) P-P: Peer-to-peer communication	MBRTU		EASY
bPS (BPS)	Baud rate	600: 600 bps 1200: 1200 bps 2400: 2400 bps 4800: 4800 bps 9600: 9600 bps 19200: 19.2k bps 38400: 38.4k bps	19200		
PRI (PRI)	Parity	NONE: None EVEN: Even ODD: Odd	EVEN		EASY
STP (STP)	Stop bit	1: 1 bit, 2: 2 bits	1		
DLN (DLN)	Data length	7: 7 bits, 8: 8 bits	8		
ADR (ADR)	Address	1 to 99	1		

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
bR (BR)	Baud rate	9.6K: 9.6 kbps 19.2K: 19.2 kbps 93.75K: 93.75 kbps 187.5K: 187.5 kbps 0.5M: 0.5 M bps 1.5M: 1.5 M bps 3M: 3 M bps 6M: 6 M bps 12M: 12 M bps AUTO 45.45K: 45.45 kbps	AUTO		EASY
AdR (ADR)	Address	0 to 125	3		
bPS (BPS)	Baud rate	9600: 9600 bps 19200: 19.2k bps 38400: 38.4k bps	38400		
FILE (FILE)	Profile number	0 to 3	0		

■ SELECT Display Setting Parameter

Menu symbol: *CSEL* (CSEL)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
<i>CSEL</i> (CS1 to CS5)	SELECT Display-1 to -5 registration	Register the operation parameter (except the Operation Mode) that is frequently modified to display it in the Operation Display. OFF, 2301 to 5000, 6701 to 6710 For the setting range, see Communication User's Manual.	OFF	Table below	STD

Use the following table to record SELECT Display setting value.

Parameter	n=1	n=2	n=3	n=4	n=5
CSn					

■ Key Lock Setting Parameter

Menu symbol: *KLOC* (KLOC)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
<i>COMW</i> (COM.W)	Communication write enable/disable	OFF: Enable, ON: Disable	OFF		
<i>dRLA</i> (DATA)	Front panel parameter data (▼, ▲ key lock	OFF: Unlock, ON: Lock	OFF		STD
<i>A/M</i> (AM)	Front panel A/M key lock		OFF		

■ DI Function Registration Parameter

Menu symbol: *di.SL* (DI.SL)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
<i>R/M</i> (AM)	AUTO/MAN switch		5025		
<i>R/L</i> (RL)	REMOTE/LOCAL switch		OFF		
<i>S/R</i> (SR)	STOP/RUN switch		5026		
<i>RUE0</i> (AUTO)	Switch to AUTO		OFF		
<i>MAN</i> (MAN)	Switch to MAN		OFF		
<i>REM</i> (REM)	Switch to REMOTE	Standard terminals DI1: 5025, DI2: 5026	OFF		
<i>LL</i> (LCL)	Switch to LOCAL	E1-terminal area DI1: 5041, DI2: 5042, DI13: 5043, DI14: 5044, DI15: 5045	OFF		
<i>RE</i> (AT)	Auto-tuning START/STOP switch		OFF		
<i>LRE</i> (LAT)	Latch release		OFF		
<i>LED</i> (LCD)	LCD backlight ON/OFF switch		OFF		
<i>PVRW</i> (PVRW)	PV red/white switch		OFF		

■ DI Function Numbering Parameter

Menu symbol: *di.NU* (DI.NU)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
<i>SPb0</i> (SP.B0)	Bit-0 of SP number		OFF		
<i>SPb1</i> (SP.B1)	Bit-1 of SP number		OFF		EASY
<i>SPb2</i> (SP.B2)	Bit-2 of SP number		OFF		
<i>PNb0</i> (PN.B0)	Bit-0 of PID number	Set an I relay number of contact input. Set "OFF" to disable the function. Standard terminals DI1: 5025, DI2: 5026	OFF		
<i>PNb1</i> (PN.B1)	Bit-1 of PID number		OFF		
<i>PNb2</i> (PN.B2)	Bit-2 of PID number	E1-terminal area DI1: 5041, DI2: 5042, DI13: 5043, DI14: 5044, DI15: 5045	OFF		
<i>MPb0</i> (MP.B0)	Bit-0 of manual preset output number		OFF		
<i>MPb1</i> (MP.B1)	Bit-1 of manual preset output number		OFF		
<i>MPb2</i> (MP.B2)	Bit-2 of manual preset output number		OFF		
<i>SPbC</i> (SP.BC)	Bit changing method of SP number	0: Status switch 1 1: Status switch 2	0		STD

■ AL1-AL3 Function Registration Parameter

Menu symbol: *ALM* (ALM)

Parameter symbol	Name of Parameter	Setting Range	Initial value	User setting	Display level
<i>AL1S</i> (AL1.S)	AL1 function selection	Set an I relay number. For the items other than below, see Communication User's Manual. Ex.) Set the number 4353 for AL1.S to use the alarm 1. Set "OFF" to disable the function.	4353		
<i>AL2S</i> (AL2.S)	AL2 function selection	No function: OFF Alarm 1: 4353 Alarm 2: 4354 Alarm 3: 4355 Alarm 4: 4357	4354		
<i>AL3S</i> (AL3.S)	AL3 function selection	AUTO (OFF) / MAN (ON) status: 4193 REM (ON) / LCL (OFF) status: 4194 STOP (ON) / RUN (OFF) status: 4195 FAIL (Normally ON) output: 4256	4355		STD
<i>ORS</i> (OR.S)	OUT relay function selection		OFF		
<i>OR2S</i> (OR2.S)	OUT2 relay function selection		OFF		

■ Error and Version Confirmation Parameter (for display only)

Menu symbol: *VER* (VER)

Parameter symbol	Name of Parameter	Status record	Display level
<i>PRER</i> (PA.ER)	Parameter error status		
<i>OPER</i> (OP.ER)	Option error status		
<i>RDIE</i> (AD1.E)	A/D converter error status 1		
<i>RDE2</i> (AD2.E)	A/D converter error status 2		
<i>PVIE</i> (PV1.E)	PV input error status		
<i>LAER</i> (LA.ER)	Ladder error status		
<i>MCU</i> (MCU)	MCU version		
<i>DCU</i> (DCU)	DCU version		
<i>ECU1</i> (ECU1)	ECU-1 version (E1-terminal area)		
<i>ECU3</i> (ECU3)	ECU-3 version (E3-terminal area)		
<i>ECU4</i> (ECU4)	ECU-4 version (E4-terminal area)		
<i>PARA</i> (PARA)	Parameter version		
<i>HVER</i> (H.VER)	Product version		
<i>SER1</i> (SER1)	Serial number 1		
<i>SER2</i> (SER2)	Serial number 2		
<i>MAC1</i> (MAC1)	MAC address 1 (E3-terminal area)		
<i>MAC2</i> (MAC2)	MAC address 2 (E3-terminal area)		
<i>MAC3</i> (MAC3)	MAC address 3 (E3-terminal area)		

- Authorised Representative in the EEA
Yokogawa Europe BV. (Address: Euroweg 2 , 3825 HD Amersfoort, The Netherlands) is the Authorised Representative of Yokogawa Electric Corporation for this Product in the EEA.
