Rexroth Bosch Group

1/12

4/3, 4/2 and 3/2 directional valves with wet pin DC or AC solenoids

RA 23178/04.04 Replaces 08.99

Model WE 6 ../.E

Nominal size 6 Series 6X Maximum operating pressure 350 bar (5100 PSI) Maximum flow 80 L/min (21 GPM) – DC Maximum flow 60 L/min (16 GPM) – AC

List	of	contents
------	----	----------

Contents	Page	 Direct solenoid operated directional spool valve, high performance version
Features Ordering details	2	 Porting pattern to DIN 24340 form A, without locating pin hole (standard); NFPA T3.5.1 MR1 and ANSI B93.7 D03
Symbols	3	 Porting pattern to ISO 4401, with locating pin hole,
Standard types	3	(ordering code/60 at the end of the valve type code);
Function, section	4	NFPA T3.5.1 MR1 and ANSI B93.7 D03
Technical data	5, 6	 For subplates see catalogue sheet RE 45052 (separate order)
Characteristic curves	7	 Wet pin DC or AC solenoids with removable coil
Performance limits	7 to 9	
Unit dimensions	10, 11	 Solenoid coil can be rotated through 90°
Plug-in connectors	12	 It is not necessary to open the pressure tight chamber when changing the coil
		 Electrical connections either as individual or central connections
		 Hand override, optional

Features

- Soft switching version, see RE 23183
- Inductive limit switch (contact or inductive), see RE 24830

¹⁾ When connecting to an AC supply a DC solenoid **must** be used which is controlled via a rectifier (see table on the left).

With an individual connection a large plug-in connectorwith built-in rectifier can be used (separate order).

- ²⁾ Also available with M12 x 1 plug connection (only version "...G24..."), ordering details and plug-in connector see RE 08010
- ³⁾ Plug-in connectors must be ordered separately (see page 4).
- ⁴⁾ Angled plug-in connector Mat. No. **R900005538** (separate order)
- ⁵⁾ Locating pin 3 x 8 DIN EN ISO 8752, Mat. No. **R900005694** (separate order)

Symbols

⁶⁾ Example: Spool E with switched position "a"ordering code .. EA..

⁷⁾ Symbol E1-: P – A/B pre-opening, Attention: Take pressure intensification with differential cylinders into account!

Function, section

Type WE directional valves are solenoid operated directional spool valves. They control the start, stop and direction of flow.

Essentially the directional control valves consist of housing (1), one or two solenoids (2), the control spool (3), and one or two return springs (4).

In the de-energised condition the control spool (3) is held in the neutral or initial position by means of return springs (4) (except for impulse spools). The control spool (3) is operated via wet pin solenoids (2).

To guarantee satisfactory operation care should be taken to ensure that the solenoid pressure chamber is filled with oil.

The force of the solenoids (2) acts via the plunger (5) on the control spool (3) and pushes this from its neutral position into the required end position. This permits flow from P to A and B to T or P to B and A to T.

When solenoid (2) is de-energised, the control spool (3) is returned to its neutral position by means of the return springs (4).

An optional hand override (6), allows movement of the control spool (3) without energising the solenoid.

Type 4WE 6.. 6X/O... (only possible for symbols A, C and D)

This version is for directional control valves with two switched positions and two solenoids without detent. There is no definable switched position when the solenoids are de-energised.

Type 4WE 6.. 6X/OF... (impulse spool, only for symbols A, C and D)

This version is for directional control valves with two switched positions, two solenoids and a detent. Both switched positions are thus fixed alternately and there is no need to continually energise the solenoid.

Note:

Pressure peaks in the tank line to two or more valves can, with valves with detents, lead to unintended spool movements! It is therefore, recommended that a separate tank line is used or that a check valve is fitted into the tank line.

Cartridge throttle (type 4WE 6..6X/.../B..)

If, due to particular operating conditions during the switching sequences, flows can occur which are larger that the valve performance curves allow, then it is necessary to fit a cartridge throttle.

This is inserted in the P channel of the directional control valve.

Model 4WE 6 E6X/...E...

Technical data (for applications outside these parameters, please consult us!)

¹⁾ Suitable for NBR and FKM	seals		Note:		
 ²⁾ Only suitable for FKM seals ³⁾ Adhered to in hydraulic systems. Effective filtration prevents malfunction and, at the same time, increases the service life of components. 		AC solenoids may be used for 2 or 3 types of supply; details			
		e.g. solenoid type W110 for: 110 V, 50 Hz; 110 V, 60 Hz; 120 V, 60 Hz	W110	110 V, 50 Hz 110 V, 60 Hz 120 V, 60 Hz	
⁴⁾ Other voltages on request				W230	230 V, 50 Hz
⁵⁾ With fitted and locked plug					230 V, 60 Hz
⁶⁾ Due to the occuring surface	e temperatures of the sole	enoid			

Due to the occuring surface temperatures of the solenoid coils, the European standards EN563 and EN982 must be taken into account!

With electrical connections the protective conductor (PE $\frac{1}{2}$) must be connected according to the relevant regulations.

Characteristic curves – measured with HLP46, $\vartheta_{oil} =$ 40 °C ± 5 °C (104 °F ± 41 °F)

9 Symbol "H" in mid position P - T

		Flow direction			
Symbols	P – A	P – B	A – T	В – Т

R	5	5	4	_	
V	1	2	1	1	
W	1	1	2	2	
U	3	3	9	4	
G	6	6	9	9	

Performance limits – measured with HLP46, $\vartheta_{oil} = 40 \text{ °C} \pm 5 \text{ °C} (104 \text{ °F} \pm 41 \text{ °F})$

Attention!

The given switching power limits are for applications with two flow directions (e.g. from P to A and simultaneous return flow from B to T).

Due to the flow forces active within the valves the permissible switching power limit may be significantly less if there is only one direction of flow (e.g. from P to A and port B blocked)! (Please consult us for applications of this kind.)

The switching power limits were measured with the solenoids at operating temperature, 10% under voltage and without tank back pressure.
