

OVERVIEW

The Metrix Digital Proximity System (DPS) combines the performance of a fully API 670 compliant eddy-current proximity measurement system with the flexibility of digital configurability. For the first time in our industry, users can configure their transducer system in the field using a custom field-generated curve as well as factory pre-configured calibrations for a variety of probe tip diameters, manufacturers, extension cable lengths, target materials, and linear ranges. Refer to page two of this datasheet for additional details on device configurability.

The DPS consists of three elements: a Probe, Extension Cable, and Driver or Transmitter.

MX8030 & MX2030 PROBE SERIES

The MX8030 and MX2030 probe series consist of 5mm and 8mm tip diameter probes. The MX8030 comes standard with triaxial cable and VibeLock™5 connector. The MX2030 comes standard with a coaxial cable and rounded knurled connectors. Both probes offer a full 80 mil (2mm) range, and are designed to offer full API 670 compliance when used with a matching MX8031 or MX2031 extension cable and a MX2033 driver or a MX2034 transmitter.

MX8030 and MX2030 probes are fully interchangeable with Bently Nevada (BN)⁴, 3300 and 3300XL 5mm/8mm probes.

MX8031 & MX2031 EXTENSION CABLES

Available in a variety of lengths and with optional protective cable armor. The MX8031 extension cable comes standard with triaxial cable and VibeLock™5 connector. The MX2031 comes standard with a coaxial cable and rounded knurled connectors.

The MX8031 and MX2031 Extension Cables are compatible with both Metrix MX8030 and MX2030 5mm/8mm probes and BN 3300 and 3300XL 5mm/8mm probes.

PROBE DRIVER OR TRANSMITTER

A driver or transmitter is available, depending on the required signal output format: the MX2033 3-Wire Driver and the MX2034 4-20 mA Transmitter. These models are fully compatible with a large variety of probes and cables from Metrix, BN, and other manufacturers including 5mm, 8mm and 11mm types.

MX2033 3-Wire Probe Driver

Dynamic Voltage Output (mV/μm or mV/mil)
MX2033 signal output is compatible with industry-standard continuous vibration monitoring systems and is in the format specified in API Standard 670. It uses -24Vdc excitation and provides the output signal in mV/μm, typically 7.87 mV/μm (200mV/mil).

MX2034 4-20 mA Transmitter

Static Current Output (mA/μm or mA/mil)
MX2034 signal output provides thrust, radial vibration, or shaft speed measurements directly to PLCs, DCSs, SCADA systems, or other instrumentation that accepts an ISA Standard 4-20 mA signal, without the use of a separate monitor system. The transmitter is a +24 Vdc current loop powered device. It is user-configurable to function as follows:

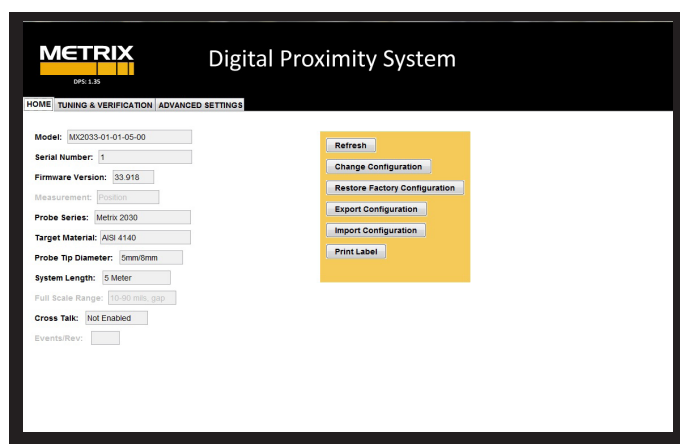

1. Radial vibration transmitter (4-20 mA signal is proportional to pk-pk vibration amplitude)
2. Axial position transmitter (4-20 mA signal is proportional to average probe gap)
3. Speed transmitter (4-20 mA signal is proportional to shaft speed)

FEATURES AND BENEFITS

Digitally Configurable

Metrix pioneered the patented technology used in the DPS which provides numerous performance and user-convenience benefits. Developed in 2005 for our vibration transmitters, the technology has proven itself in tens of thousands of installations worldwide. You can configure the device using the included software¹ in three ways:

- **METHOD #1** - By ordering per this datasheet (refer pages 7 and 8).
- **METHOD #2** - By using the included software to change the configuration to any of the available options for MX2033 drivers and MX2034 transmitters (refer to pages 7 and 8 respectively).
- **METHOD #3** - Generate a custom curve in the field² by recording the gap voltage at increments specified by the software. A custom linearization table is then generated and loaded into the device.

These configuration options provide the user with maximum flexibility and accuracy in adapting a single driver or transmitter device to the following parameters:

- Target material (including unknown or undetermined materials)
- Probe series and tip diameters from various manufacturers
- Extension cable lengths
- Position, thrust, radial vibration or speed measurement³
- Full scale range³
- Upscale/downscale direction³

The driver or transmitter is configurable via a USB port, protected under the baseplate of the device. The DPS configuration software is available as a free download at metrixvibration.com.

The DPS Configuration Software features a simple, intuitive user interface that makes it easy to configure the driver & transmitter in the field. Users can select from a discrete list of factory pre-configured curves using drop-down boxes, or generate a custom linearization curve in the field by entering gap voltages at increments specified by the software.

User Labels

Configured DPS units can easily be identified in the field using the DPS configuration software and our optional Metrix User Label Kit P/N 100527 (see Accessories on page 11). The kit consists of specially shaped polycarbonate overlay labels and paper labels (Avery 6570). The customized details are printed on an Avery 6570 label, and this is affixed under a clear rectangular window in the polycarbonate overlay label, providing a weatherproof seal. Target material, probe type and series, system length, and output sensitivity can be recorded. We provide user-configurable fields where you can record installation- and device-specific details such as date of last calibration, instrument loop tag numbers, probe location (machine / bearing / angular orientation), and any other details useful to machinery and instrumentation personnel.

NOTES:

1. One can download the Metrix Digital Proximity System (DPS) software from metrixvibration.com.
2. Custom curves assume standard supported probe types (MX2033/MX2034 option BB) and system lengths (MX2033/MX2034 option CC), and that mismatched systems will not be used, such a 7200 cable with an MX2030 probe. Certain material types may limit total available linear range and other specifications. These can be quantified when a material sample is provided to the factory.
3. These settings are applicable to MX2034 transmitters only.
4. Registered trademark(s) of Bently Nevada®.
5. Registered trademark(s) of Metrix®.

FEATURES AND BENEFITS (Continued)

Full API 670 Compliance

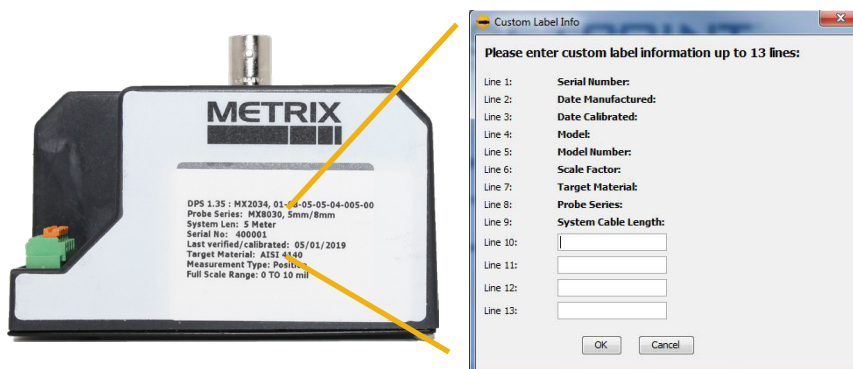

The DPS was designed to fully comply with API 670 for linear range, interchangeability, standard probe configurations, and all other details.

Reduced Spare Parts Inventory

The DPS reduces the requirements for spare parts by allowing a single type of driver or transmitter to be field-configured for a wide range of probe types, cable lengths, and target materials.

Interchangeability

The Metrix 10,000 Series MX8030 and MX2030 probes and MX8031 and MX2031 extension cables are fully interchangeable with BN 3300 and 3300XL 5mm/8mm probe systems. Such compatibility provides greater choice of suppliers without the need to replace installed probes, cables and drivers.

A user-generated label can be printed in the field with all device characteristics as well as user-specific tagging and installation particulars.

Support for Older Probe Systems

Replacing a complete proximity transducer system including probes/cables buried inside a machine can be expensive and impractical when a machine must keep running. The ability to support older probe systems is becoming increasingly important as users push their plant outage intervals to more and more years. Imagine being able to support not only a multitude of older probe systems, cable lengths, and target materials, but to be able to do so with just a single driver or transmitter. MX2033 drivers and MX2034 transmitters allow the user to change the configuration in the field for use with virtually any Metrix or BN proximity probe and cable (see ordering information on page 7 and 8 for currently supported probe systems).

SPECIFICATIONS

The specifications on the following pages are based upon the following system components, target materials, gaps and temperatures^{1, 2} within the Metrix 10,000 proximity probe and cable series:

- MX2033 3-wire driver
- MX8030/MX2030 8mm probe with 0.5m cable
- MX8031/MX2031 4.5m extension cable
- AISI 4140 steel target gapped at 50 mils (1.27mm) from probe tip
- Temp = 22° C
- 17 μA_{RMS} current loop noise floor

Specifications for MX2034 loop-powered transmitters assume the same probes, cables, target materials, temperatures, and current loop noise floor as shown above.

Interchangeability and accuracy specifications assume the above Metrix products and target materials; they may differ when components from other manufacturers are mixed with Metrix components³.

NOTES:

1. The American Petroleum Institute (API) Standard 670 defines two temperature ranges for proximity probe systems: Testing Range and Operating Range. Except as otherwise noted, all specifications herein are for system performance at 22°C, in the middle of the API 670 Testing Range (0°C – 45°C).
2. Target materials other than AISI 4140 steel may restrict the transducer system's linear range and other specifications. Consult the factory whenever using a non-4140 target to ensure the transducer system will be suitable for the intended measurement range and accuracy requirements. The accuracy limitations on page 5 of this Datasheet should be increased by +/- 5% from the stated values when using a non-4140 target material.
3. A manufacturer's interchangeability specifications are based on statistical variations against their own reference transducer system. Because the reference transducer systems used by other manufacturers are not within the control of Metrix, interchangeability specifications for mixed systems cannot be guaranteed, but will generally be about twice as large as when all transducer system components come from a single manufacturer. However, where known, these differences can be compensated in the field using the transducer system's configurability capabilities, allowing mixed system performance to meet or exceed that of a non-mixed system.

SPECIFICATIONS (Continued)

ELECTRICAL

Channels:

Driver or transmitter accepts one probe and extension cable

Supported Probe Types:

MX2033 driver and MX2034 transmitters are compatible with the probes and extension cables as shown.

PROBE SERIES	TIP DIAMETER	METRIX DATASHEET
MX8030 and MX2030	5mm/8mm	1507096
Metrix and BN 3000	.190"/.300"	1004736
Metrix and BN 7200	5mm/8mm	1009553
BN 3300 and 3300XL	5mm/8mm	N/A
Metrix 7200	11mm	1004596
BN 3300XL	11mm	N/A

Contact factory if you need other probes or cables.

Driver or Transmitter

Excitation Voltage:

(Reduced linear range will occur when voltage at the driver or transmitter terminal is more positive than -19 Vdc)

Axial position	4-20 mA proportional to position (mils, μm) ¹								
RPM	4-20 mA proportional to speed								
	Terminal: 5mm & 8mm (7.87 mV/μm (200 mV/mil)), 8mm Extended Range & 11mm (3.93 mV/μm (100 mV/mil)) (instantaneous gap)								

Field Wiring Gauge:

Recommended: 0.8 mm² (18 AWG)
Allowed: 0.2 to 1.3 mm² (16 to 24 AWG)

Field Wiring Type:

- MX2033: 3-conductor shielded cable
- MX2034: 2-conductor shielded cable (4-20 mA)
- RG-58 A/U coax cable (BNC connector)

Max. Field Wiring Length:

MX2033: 300 m (1000 ft) driver to monitor²
MX2034: 4-20 mA: 5000 m (16,400 ft) transmitter to Control System³

Min. Target Size:

15.2 mm (0.6 in) diameter (assuming flat surface)

Min. Shaft Diameter:

Minimum: 50.8 mm (2.0 in), TightView-XY (to 12.7mm(0.5in))

Linear Range:

PROBE TYPE	RANGE
MX8030 and MX2030 (5mm/8mm)	2mm or 80 mils*
BN 3300 and 3300XL (5mm/8mm)	
Metrix and BN 7200 (5mm/8mm)	
Metrix and BN 3000 (.190 in)	1mm or 40 mils*
Metrix and BN 3000 (.300 in)	1.25mm or 50 mils**
BN NSv and RAM	1.5mm or 60 mils*
MX8030 Extended Range (8mm) and Metrix 7200 and BN 3300XL (11mm)	4mm or 180 mils

All Metrix proximity probes and cables fall under the 10,000 series.

* Range starts at approx. 10 mils (250μm) gap (-1V)

** Range starts at approx. 20 mils (500μm) gap (-1V)

Suggested Probe Gap:

MODEL	VOLTS
MX2033	-9V
MX2034	+9V

NOTES:

1. For vibration and position the current output will be driven to the less than 3 mA if probe to target is out of 10-90 mil range for 5mm/8mm probe or 20-180 mil for MX8030 Extended Range and 11mm probe system.
2. Length limit is imposed by distributed cable capacitance and corresponding frequency response roll-off. Assumes standard 18 AWG 3-conductor cable with capacitance of 290 pF/m, no I.S. barriers. Total cable capacitance in excess of 450 nF will limit frequency response at monitor to less than published 8-kHz specification. Consult the manual (Metrix Document 1093672) for further details.
3. Length limit is imposed by distributed cable resistance and corresponding voltage drop at maximum current output. Assumes 18 AWG 2-conductor cable with resistance of 20 Ω/km, 24 V_{dc} supply voltage, 250 Ω load resistance, no I.S. barriers. Consult the manual for further details.

MECHANICAL

Driver and Transmitter Case Material: PBT thermoplastic polymer blend (contains PBT, carbon fiber, and glass beads)

Connector Torque:

Maximum: 0.565 N-m (5 in-lb)
Recommended: finger tight

ENVIRONMENTAL

Working and Storage Temperature:

Driver or Transmitter: -40°C to +85°C (-40°F to +185°F)

Relative Humidity: 95%, non-condensing

Patents: Digital performance curve technology in driver and transmitter: US patent number 7768258.

NOTES:

- Values shown are for 5m systems. For 9m systems, allow an additional ±1.5% ISF and DSL variance. These variances assume a 4140 Target Material, see note 2 page 3 for other materials.
- Use of proximity probe system components from other manufactures may introduce measurement errors. For other manufacturer Interchangeability errors, when measured in increments of 0.25 mm (10 mils) over the linear range between 65°C and -35°C (API Operating Range), allow an additional ±1.5% ISF and DSL variance.
- ISF shown assumes mV-type output and is valid for MX2033 and BNC connector on MX2034.
- Above ISF values for MX2034 transmitter pertain only to the BNC connector, however, the API 670 standard for ISF for the transmitter's 4-20mA proportional output is attainable when configured for Position and Vibration (for vibration calibration checks, the design and calibration errors on the vibration input device must be included, typically for a shaker up to 8%). When an MX2034 transmitter is configured for speed, proportional output error is less than 1%.
- For these legacy systems, the ISF variance stated is for the API 670 Test Range -0°C to +45°C (+32°F to +110°F) with a 10-point custom calibration. Outside the Test Range, but within the API 670 Operating Range -35°C to +65°C (-30°F to +150°F) the allowable variance is ±25%.

RECOMMENDED BARRIERS

Passive Zener: MX2033: MTL 7796- (or equivalent)
MX2034: MTL 7787+ (or equivalent)

Active Galvanic: MX2033: MTL 5531, P&F KFD2-VR4-Ex1.26, or equivalent
MX2034 (DD=5): MTL 5541, P&F KFD2-STC4-Ex1, or equivalent
MX2034 (DD=7): P&F KFD2-STC4-Ex1, or equivalent for terminals 1+ & 3-
P&F KFD2-VR-EX1.19-Y109129, or equivalent for BNC (terminals 4+ & 5- must not be used)

WEIGHT AND DIMENSIONS

Dimensions:

MX2033 Driver: See Fig 1, page 6
MX2034 Transmitter: See Fig 2, page 9

Weight:

MX2033 Driver: 247 g (8.7 oz)
MX2034 Transmitter: 247 g (8.7 oz)

ACCESSORIES

Mounting Options for MX2033 and MX2034:

- 35mm DIN rail (standard)
- 4-hole flat base with 2" x 2" and 2.5" x 2.75" hole patterns (requires optional adapter P/N 9647)

Note:

* Intrinsically safe not available for MX2034 4-wire (EE=04, 05 & 06)

All Metrix proximity probes and cables fall under the 10,000 series.

NOTES:

1. AISI-SAE 4140 chromium molybdenum steel is the standard default calibration per API 670. If no material type is specified at time of ordering, a factory-standard AISI 4140 target will be used. Calibration to target materials other than 4140 may restrict linear range and other specifications. Consult the factory.
2. Due to the electrical properties of this material, vibration measurement accuracy may be affected when using this target.
3. Calibration to other material types is available upon request. Metrix will normally request that the customer supply a suitable sample of the material, allowing a machined target with appropriate surface finish to be produced.
4. Compatible with BN 7200, 3300, 3300XL, NSv, and Metrix MX2030, MX8030 probes only.
5. Compatible with BN NSv and RAM probes only.
6. Compatible with BN 7200, 3300, 3300XL, and MX2030, MX8030 probes only.
7. Compatible with 3000 series probes only.
8. ETL, ATEX and IECEx hazardous area approvals.
9. Can be used with the MX8030 TightView Probe System.
10. Used to prevent cross talk when paired with an option BB=09 DPS (Shaft diameters <1.5 inches (37.5 mm)).

4	6	X35CrMo17 / X39CrMo17-1
4	7	BS970 070M55
4	8	A276 Type S32760

ACCESSORIES

DPS User Label Kit for up to 16 devices (P/N 100527)

Each MX2033 driver and MX2034 transmitter comes with the four factory-applied labels summarized below. The *DPS User Label Kit* allows the Left Sidewall Label to be replaced with a customized label containing installation-specific data, as depicted on page 3 of this datasheet. The User Label Kit contains enough materials for labeling up to 16 signal conditioners as follows:

- 16 specially-shaped polycarbonate adhesive labels with a clear rectangular window and the Metrix logo.
- A sheet of 32 standard 1.75" W x 1.25" H labels (Avery 6570).

Using the Metrix DPS Configuration Software, the desired information is printed directly onto the Avery 6570 sheet using any Windows-compatible inkjet or laser printer. The printed Avery label is removed from the sheet, placed behind the window on the polycarbonate label, and both are then affixed to the left sidewall of the DPS signal conditioner. The polycarbonate label uses the same finish as all other factory-applied labels, providing protection from the elements and giving a clean, durable, and professional finish.

NOTE: The User Label Kit must be ordered separately and is not automatically included with driver or transmitter.

Of the four labels affixed to each DPS signal conditioner, only the Left Sidewall Label is intended for customization and field replacement. The others are designed to remain permanently affixed to the device during its life and contain information that does not change with device configuration.

1. Left Sidewall Label (Configured Devices)

All devices ordered in a configured state will have this label affixed. The label will reflect the as-ordered configuration data.

2. Right Sidewall Label

This is a factory-applied permanent label with the serial number, date of manufacture, model number and all approvals data.

3. Front Label

This is a factory-applied permanent label that indicates the connector for the probe and extension cable.

4. Top Label

This is a factory-applied permanent label that indicates the wiring terminals, model number, and (MX2034 only) BNC connection details. A machine tag label can be placed in an open space here.

* Registered trademark(s) of Bently Nevada®.

DIN to 4-Hole Flat Base Mounting Adapter (P/N 9647)

This adapter allows the 35mm DIN rail clip on MX2033 driver, and MX2034 transmitters to be compatible with a 4-hole flat base mounting method. The adapter has industry-standard hole patterns for both a 2" x 2" square and a 2.75" x 2.5" rectangle. The 2" x 2" pattern matches the holes on Metrix 5533 drivers and BN* 3300, 7200, and 3000 series Proximitor* devices. The 2.75" x 2.5" pattern matches the holes on Metrix 5465/5488 transmitters and BN* 990/991 transmitters. Material is 19 gauge mild steel (ASTM A366 or equal) with gold chromate zinc plating.

MANUALS AND SOFTWARE

The most recent versions of the Metrix DPS Configuration Software and the DPS user manual can be downloaded from the Metrix website, www.metrixvibration.com.
